Telephony devices

for Smart Business Connect

Modern fixed telephone from one source:

- Most existing analogue phones can continue to be used; however, the keypad must include the * and # keys.
- Dial-operated phones are no longer supported; if you still wish to use a dial-operated phone, you will need a pulse dial to DTMF adapter. This is not supplied by Swisscom. Please note that Swisscom cannot guarantee the function of this special application.
- With the Enterprise Telephony service, you can make calls via audio or video with your fixed network business number, even if you are out of the office. Incoming calls can reach you on your smartphone/tablet or computer/laptop via your fixed network number. The service can be used through smartphone apps and desktop clients.

IP telephones

With IP telephones, enjoy all the benefits of modern landline telephony. The following IP telephones can be used with Smart Business Connect. We have tested a wide range of IP telephones and approved them for Smart Business Connect. The following IP telephones can be obtained through your partner:
