

Unify Circuit

The collaboration app for efficient teamwork. Made for teams and project organisations

Increasing levels of mobility often mean that employees are no longer sitting in the same office, but are instead located at multiple different locations. And they often even have to work in different teams and project organisations.

The collaboration app, Circuit, has been developed to meet these changing demands in the working world. You get everything you need for efficient teamwork in a single app.

Organising workflows and processes using e-mail is now a thing of the past. With Unify Circuit, you work and communicate with a single interface, which you also use to control all of your activities.

Persistent conversations for teams and project organisations

Persistent conversations for teams and project organisations. Circuit summarises all communication into so-called conversations. All of the information that you have shared is retained at the end of a meeting.

Lively video conferences and document sharing

Call someone with the click of a button or set up an online meeting. External participants dial in using a phone. If you want to discuss a document, simply upload it to the conversation, even during a meeting. You can also record the conferences, such as for logging purposes.

Access with any device, whether in the office, at home or on the go

No matter where you are working, you can access your conversations with Circuit. The app works on

- PCs
- Laptops
- Tablets
- Smartphones

With "Session Swiping" you can even forward a live conference from your PC to a mobile device and vice-versa without interrupting the conference.

With Circuit you can make it easier for teams and project organisations to collaborate

Workspace with structure

All of the information remains in the area where it was shared.

Everything on a single screen

Voice, video conferences, screen-sharing, group chats and data exchanges.

Fast searches

Find what you are looking for quickly.

Limitless mobility

Collaboration is location- and device-independent thanks to access via web browser or app

Details & Functions

Circuit by Unify – in detail

Conversations and chat	Everything starts with a conversation – a searchable thread consisting of texts, files and all other kinds of content which you have shared with colleagues, teams or other persons in your company. This allows you to establish proximity between the individual team members, organise your projects and complete important tasks.
Calls	Personal meetings are a luxury nowadays. But thanks to great voice quality and HD video, Circuit allows you to organise meetings that are just as natural. Are you not at your desk all of time? No problem! Simply transfer a call from your PC to your telephone without no interruptions with a simple swipe movement. You will have access to the same functions, which means you can continue to work with others while on the go.
PSTN connection	You want to contact someone outside of Circuit? Simply enter the required telephone number. Circuit forwards your call automatically via your SIP voice platform.
Screen-sharing	So that all participants are up-to-date. Share a document or start a demo via our simple screen-sharing tool.
Share a document	You want to share a file? Simply save the document in a context-related manner within the respective conversation or the open meeting room
Video conferences	Start video conferences directly via the group chats with your dialogue partners or invite them to join a conference using Outlook. You will be able to experience your dialogue partners up close in HD quality.
Guest access	If a meeting on-site is not possible, invite your customers or partners to use Circuit as a guest and experience a whole new kind of collaboration.
Search	As all information provided during conversations is saved, you will be able to find it at again any time.
API interfaces	Integrate your work processes seamlessly into Circuit. Circuit supports public a API interface for integrating many different kinds of applications or chat bots directly into the Circuit conversations.

Embrace the digital future with Swisscom

Visionary companies are using the possibilities offered by digitization to redefine the future. Swisscom is also developing new fields of business with numerous innovations. We see it as our task to support you in using digitisation optimally.

We provide you with the best network infrastructure, secure data storage, reliable project management, successful implementation and numerous innovative solutions.

Welcome to the world of possibilities.
