

# Swisscom Billing & Analytics

Creates transparency and increases your productivity

The complexity and requirements of the digital world are posing an ever greater challenge for companies. Suitable management tools are absolutely essential for the efficient management of costs and usage. With its Billing & Analytics service, Swisscom provides the transparency that is needed here, thus making it possible to optimise company resources.

## What is Billing & Analytics?

### Checking invoices

Invoices can be accessed online in the Swisscom Business Center, downloaded and sent by e-mail. You can directly view the costs incurred, check them and analyse them using reports.

### Transparency

Swisscom Billing & Analytics presents the latest cost and usage data. For example, you can send automated itemised bills directly to employees in electronic form.

### Suitability for individualisation

Your company is unique – and so are your processes. Swisscom Billing & Analytics provides you with standard reports that allow you to define additional reports in line with your requirements. You can define the access rights for users individually.

### Current data

The data used by Billing & Analytics is updated on a monthly basis, meaning that, even during the current month, you can work efficiently on the move while enjoying a high degree of cost security. The service provides the option of defining alerts for cost and/or usage limits.

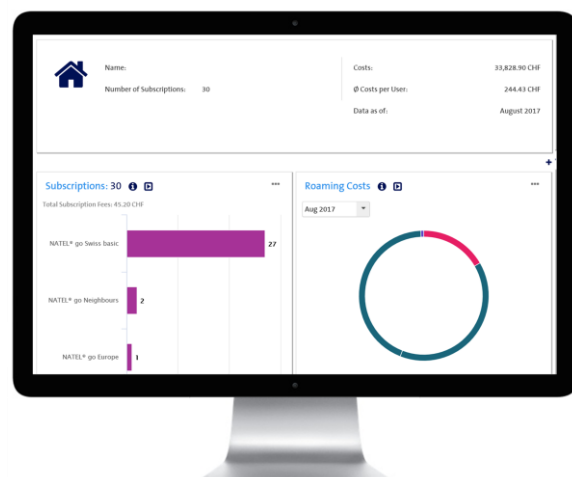

### Trust

The data and documents collected are processed, protected and hosted locally in the Swisscom Data Center in line with the highest standards.

### Your advantages with Swisscom Billing & Analytics:

- > Cost and usage data available at a glance online
- > Access to the latest call charge data and costs at all times
- > Analysis of cost type and usage behaviour
- > Data updated monthly and/or daily
- > Online administration of invoices and invoice options
- > Potential for optimisation identified by means of cost and usage analyses
- > Transparency thanks to standard and/or individualised reports
- > Possibility of automating reports and dispatch for predefined recipients
- > Creation and dispatch of itemised bills
- > Prompt notification if any of the usage limits you define are exceeded
- > Data structured on graphical dashboards
- > Access to raw data

### Dashboard for the standard analysis of mobile communication
