

Multi Device **NATEL[®] go**

Use multiple devices
with one subscription

swisscom

Using a mobile phone subscription with several devices in parallel

Do your employees use several mobile devices when they are on the move? Do they use an additional mobile end device for certain activities on which they would also like to be reachable by phone? Then **Multi Device** for **NATEL® go** is the optimum solution for your company.

Your benefits

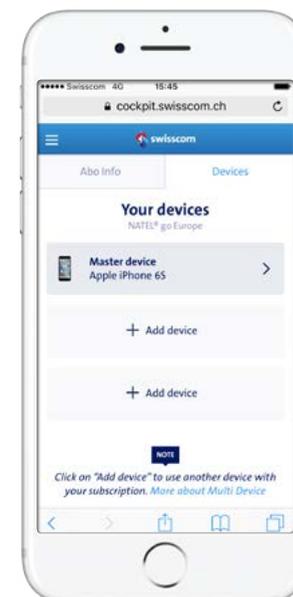

- > The simplest and fastest way to ensure availability on all employee devices.
- > Reduce your administrative costs: No handling additional contracts with different contract periods.
- > No multiple ordering of tariff options and roaming data packages required. One roaming limit for all devices.

Multi Device in combination with NATEL® go

Multi Device is available as an option for NATEL® go. This means that for all flat rate subscription types (go Swiss, go Neighbours, go Europe and go Global) up to five additional devices (e.g. tablet, notebook or another smartphone) could be used or included on the same account. The Multi Device option could be activated on the desired mobile connection via the Order Management.

All devices are visible at a glance in the Swisscom Cockpit

Besides the roaming settings the Swisscom Cockpit offers a new overview of the devices and SIM cards used. End users can reach it via a mobile device, and the fleet manager can reach it via the Business Center.

- > Personal overview of the mobile devices of the end user (located next to the roaming settings).
- > In the event of device loss the SIM card in question can be blocked from any device.
- > Call settings (e.g. parallel ringing) can be adjusted at any time by the end user.
