Backup and restore router configuration

1.1 Need

You have adapted your Centro Business router settings to your needs and would like to make a backup copy of the settings or to load saved configuration data onto your Centro Business router.

1.2 Description

In order that you can restore all settings after a factory reset or if you have to exchange your Centro Business router, we recommend that you save the configuration settings locally after any change you make.

1.3 Requirements/limitations

Requirements:

- Swisscom contract: Business Internet Services, My SME Office, inOne SME office, Business Internet light, Internet connection for residential customers
- Firmware-Version
 - Centro Business 2.0: 8.06.06 or higher
- You are logged into the router portal

Restrictions:

Known Limitation The restoration of the Centro Business 2.0 configuration (Backup & Restore), which was generated on an older firmware version, is not possible due to the fundamentally revised data model. It is recommended to create a backup file recurrently on an installation with new firmware.

* The illustration is identical for both Centro Business 1.0 and Centro Business 2.0.

1.5 Save router configuration (backup)

In your router settings, select the menu option **Router > Backup and Restore**. Click on **Backup**.

The configuration file “conf_xy...1234.bin” is created by the router. You can now save it on your PC or on a USB stick .

1.6 Restore router configuration

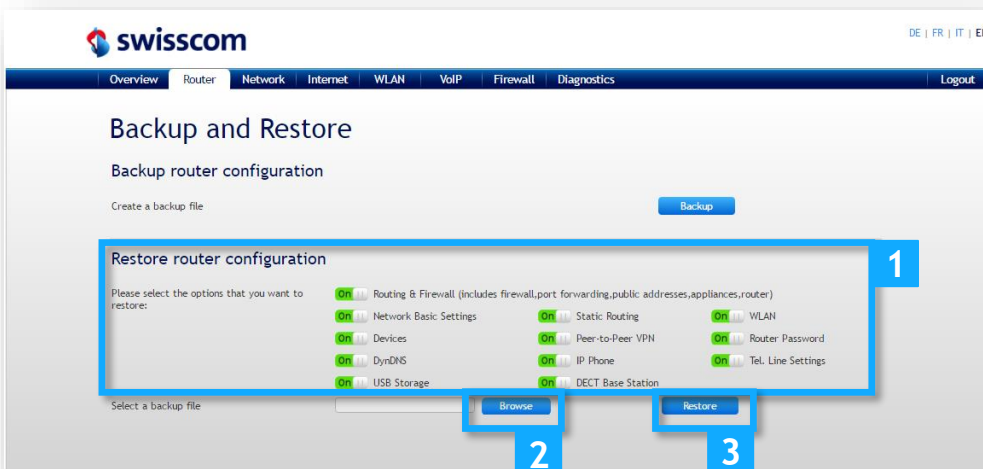

In your router settings, select the menu option **Router > Backup and Restore**.

1. Select which options you want to restore.*
2. Click on **Browse** and choose the saved backup file.

Now click on **Restore**.

Important:

Backup files created with older firmware are not always compatible.

*Step 1 is only supported by Centro Business 2.0.
