# Control Internet access

---

## 1.1 Need

You have installed your inOne SME office / Business Internet Services Internet connection. You now want to control the settings in your Centro Business router.

## 1.2 Description

When you install a inOne SME office / Business Internet Services Internet connection, the necessary Swisscom settings are automatically transferred to your Centro Business router. You can check the settings or adjust them if you have any problems with the installation process via the router portal.

## 1.3 Requirements/Limitations

### Requirements:

- Swisscom Contract: My SME Office, Business Internet Services, Enterprise Connect XS
- Centro Business 2.0 with current firmware version. You can find the firmware on the official Centro Business help page under [Update Firmware](#)
- Access to the router portal is established

### Restrictions:

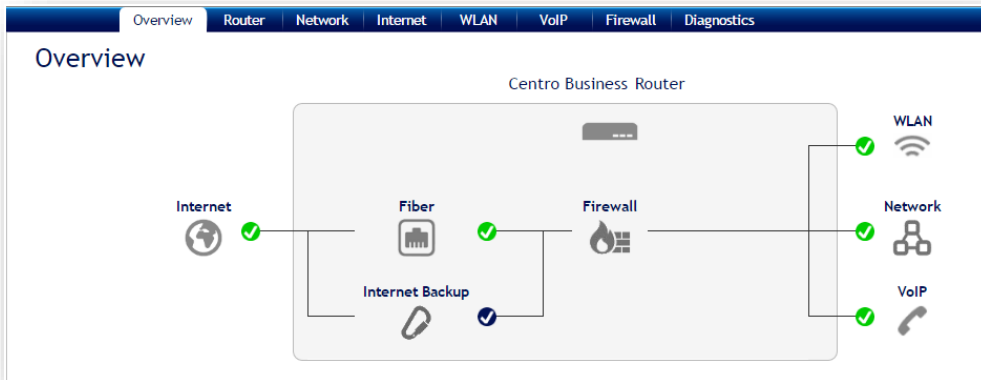

- None

## 1.4 Illustration

None

## 1.5 Control basic settings in Overview menu

In the **Overview** tab on your Centro Business router, you can see whether the Internet connection, the wireless network (WLAN) and the fixed-network telephony IP (VoIP service) are working correctly. A green tick means everything is OK. Blue ticks mean that the function is ready for use but not currently being used. If a service is not working or not activated, a red cross is shown.

Under the same tab, you will also find numerous technical details about your Internet connection. This information is helpful if a service is not available as expected.
