

Fail-safe system option for Swisscom Line basic

Fail-safe for emergency telephone systems

The fail-safe system option can be used to equip your existing emergency telephone system – in your lifts, for example – for IP technology. The option can be ordered together with your IP-based Swisscom Line basic telephone connection. Thanks to dual redundancy in the case of both power and network failure, the option ensures the availability of an emergency telephone link so that contact can be made in case of emergency.

How you benefit

- Secured against network failure with a mobile fail-safe system
- Secured against power outages with an Uninterruptible Power Supply (UPS) emergency power system (support and guarantee provided by the manufacturer)
- IP-based telephony with top voice quality

Price overview for the fail-safe system option

> Fail-safe system option, incl. USB stick with Internet-Box standard router	CHF 5.00/month Free of charge
> Optional: UPS emergency power system*	CHF 89.00 (one-off charge)
> Optional: Installation by specialist (fixed price)	CHF 240.00 (one-off charge)

Requirements for the fail-safe system option

> Swisscom Line basic single connection	CHF 25.25/month
---	-----------------

* The UPS emergency power system can also be ordered without the fail-safe system option.

Swisscom offers its IP landline services as a best-effort service.
