

Conditions for the Offer

inOne SME office

1 General

These Conditions apply to the service “inOne SME office” (hereinafter referred to collectively as “the Service”) from Swisscom (Switzerland) Ltd (hereinafter referred to as “Swisscom”). These “Conditions for the inOne SME office” shall apply in addition to the “Swisscom General Terms and Conditions for Business Customers” (“GTCs”) as well as the special conditions for fixed networks, Internet, special conditions Swisscom blue TV for business customers, the SLA Definitions for Business Customers and also the offer conditions for Security Options, which take precedence in the event of any contradictions or ambiguities. These contractual provisions can be consulted at www.swisscom.ch/b2b-legal, www.swisscom.ch/sme-security and www.swisscom.com/inonesme.

The availability of the Service can be checked at www.swisscom.ch/inonesme.

inOne SME office is designed for SME customers. However, Swisscom will gladly assess the availability for corporate customers on request on a case by case basis.

2 Performances by Swisscom

2.1 General information

The Service consists of a fixed component as the basis for company communication, with other components that can be added individually, such as additional phone numbers. Additional options or package benefits may be available depending on the selected service variant. The detailed contents of the individual components as well as possible combinations thereof can be found at www.swisscom.com/inonesme.

The Service may only be used for normal business customer use. With regard to telephony, the Service is valid for normal voice telephony and not for special applications such as machine-to-machine and permanent connections.

2.2 Site connectivity

Site connectivity is the connection of the router at the Customer's premises with the Swisscom network. Swisscom shall stipulate whether site connectivity will take place via xDSL (copper) or fibre-optic cable.

2.3 Mobile package benefit

Authorised Swisscom mobile subscribers may qualify for package deals for certain combinations of inOne SME office subscriptions. Details can be found on the homepage or in brochures.

2.4 Business telephony with business telephony app/client

2.4.1 General information

In addition to normal telephony usage, this Service makes it possible to have software-based usage for business telephony by means of a Business Telephony App/client. The Business Telephony app/client is installed on a computer or smartphone. It allows the Customer to make calls via the Internet Protocol using WiFi connections or via Mobile Data or Mobile GSM with centrally provisioned PBX functionalities.

2.4.2 Customer and user

The Customer is the owner of the connection at the company's main site. The Customer is also the contract holder for the Business Telephony app/client used by the users (employees). A user is a person to whom the Customer grants the right to use the business telephony app/client. A user can install the Business Telephony app/client on an unlimited

swisscom

number of devices, but may only use it on 2 devices (Smartphone and PC). The devices that was last started can be used for communication. A Smartphone and PC can be used simultaneously.

2.4.3 Usage / Emergency calls while underway

Customers and all users can also use the Business Telephony app/client worldwide, regardless of their location (so-called "nomadic use"). Impeccable voice quality cannot be guaranteed if calls are made via the configured Business Telephony app/client. This is dependent on the quality of the connection at the respective location.

Emergency calls are always sent to the relevant emergency services at the company location. This also applies for the use of the Business Telephony app/client outside the main location, while underway. We therefore strongly advise against using the Business Telephony app/client outside the company location.

If the Business Telephony app/client is used on a mobile device (smartphone) the localisation only takes place via the mobile network or SIM card, if the SIM card used in the device is configured for voice telephony and the emergency number 112 is selected.

2.4.4 Phone numbers

Existing phone numbers (single numbers, multiple numbers) may be configured on the appropriate Business Telephony app/client, with the approval of owner of the connection.

2.5 Swisscom TV

All Swisscom TV Public and blue Sportsbar services may be used privately or for commercial purposes. The customer is responsible for the correct reporting and billing of the licence fee (Serafe) and the copyright collecting societies (namely SUISA).

However, Swisscom blue TV L (independently of the licence fee or any copyright fees paid, for example for public viewing or for general background entertainment) may only be used privately and never commercially. In particular, reception and use of Swisscom blue TV L content in publicly accessible areas, e.g. in cafés, restaurants, hotels, cinemas, theatres or shop windows, rental and editing of programmes for use in public areas are prohibited. This also applies if the customer additionally obtains Pay TV content via Swisscom blue TV L, which may permit commercial or public use limited to the content of the Pay TV offer (e.g. blue Sportsbar). **The violation of these usage restrictions constitutes an important reason for cancellation for Swisscom and obliges the customer to indemnify Swisscom and the infringing rights holders or their representatives.**

The youth protection mechanisms partly pre-installed by Swisscom may be deactivated by the customer at the customer's own risk.

2.6 Support

Swisscom operates a free SME hotline (0800 055 055) for reporting faults in the Service. There is no charge for rectifying faults within the Swisscom infrastructure.

2.7 Service Level Agreement (SLA)

The "SLA Definitions for business customers" lay down the general principles of service quality and the measurement thereof. The specific scope of the service levels, such as target values, prices, etc., can be found on the homepage (www.swisscom.ch/b2b-legal).

The Services described herein are deemed to be managed objects pursuant to the document "SLA Definitions for business customers". Service faults should be reported to the free SME Service Desk (0800 055 055). For each Service Level, it is defined within the precise scope whether a compensatory payment shall be due upon a target value not being attained. The amount of compensation to be provided in such an event shall correspond to the monthly charge for the overall Service, (including subscribed options) excluding accumulated phone charges outside of the flat rate.

swisscom

2.8 Internet backup

With certain service offers the customer receives with Internet Backup a backup Internet connection of restricted performance in the event of an outage. For the Internet backup to function, it is necessary to have a radio connection with the Swisscom mobile network (GSM/UMTS/LTE) inside the building at the customer's location, which cannot be guaranteed.

The hardware supplied by Swisscom for this purpose passes into the ownership of the customer; it only works with the devices and offers approved by Swisscom for Internet Backup. No mobile services can be used with this mobile connection apart from packet switched data on the Swisscom mobile network. It is not possible to guarantee the same speed and quality of connection as with a fixed network Internet connection. This applies to IP telephone calls in particular.

Internet Backup must only be used as a temporary and stationary stop-gap measure in the event of outage of the fixed network Internet connection. It is not permissible to deactivate the latter deliberately in order to switch to Internet backup.

If the customer changes to a package with Internet Backup, the minimum subscription period for the package in question is two months. If the package is cancelled or if the customer changes to a package without Internet Backup, the backup connection via the mobile network can no longer be used.

2.9 Option Publifon

2.9.1 Prerequisites for the Option Publifon

The Option Publifon requires inOne SME office (excl. inOne SME office light) and can only be activated and terminated by phone (0848 881 180).

2.9.2 Monthly option charge

With the monthly charge for the option, calls to value-added services and business numbers (in particular 084x and 090x), short numbers and international telephone numbers are blocked.

2.9.3 Outgoing calls

Outgoing calls to normal national, geographical fixed network numbers and normal national mobile numbers are covered by the subscription charge for the telephone number.

National emergency numbers can be reached, whereby calls to the following telephone numbers are subject to a charge:

- 140 (breakdown assistance, 20 centime/call)
- 1414 (Rega, 20 centime/call)
- 1415 (Air Glacier, 20 centime/call)
- 143 (Die Dargebotene Hand, 20 centime/call)
- 145 (Tox Info Suisse, standard rate 8 centime/call, off-peak rate 4 centime/call)

2.9.4 Services of the Customer and Obligation to Cooperate

The customer is responsible for all usage of its connections, also when used by third parties. Furthermore, it is responsible in particular for paying all amounts billed in relation to service utilisation - whether authorised or unauthorised. In this regard, we recommend that the customer

- does not use the option in connection with foreign digital devices such as third party routers, third party IP phones, etc.
- does not use any DECT devices with the option. Swisscom recommends using an analogue, corded phones with robust casing.

swisscom

- protects the router against unauthorised access.
- treats the SIP credentials – if requested – confidentially and not to disclose them to any third parties.
- deactivates the Combox function for numbers with an active Option Publifon.

2.9.5 Duration and Cancellation

The Option Publifon can only be activated and terminated by phone (0848 881 180). The parties can terminate the Option Publifon to the end of a month by phone or in writing.

2.10 Fixed IP address option

Fixed IP addresses enable Customers to operate their own e-mail or Web server. IP addresses are taken from the IP address range assigned to Swisscom by RIPE (Réseaux IP Européens) in accordance with the RIPE guidelines. Customers are not entitled to select specific IP addresses. Swisscom may change IP addresses at any time. If the Customer ceases to use the option, the IP addresses will revert immediately and completely to Swisscom.

It should be noted that in the case of the subnetworks with between 4 and 256 fixed IP addresses, 3 IP addresses are required for the technical provisioning of the Service and can thereafter no longer be used for customer-specific services.

3 Obligations of the customer

3.1 Duty to cooperate

3.1.1 General information

The customer must provide Swisscom with all the information required for activating and installing the Service and for remedying faults. The customer grants Swisscom or third parties commissioned by Swisscom access to the relevant documents, information and premises.

3.1.2 Routers and other devices on Customer premises

For technical reasons, only routers and other devices approved by Swisscom may be used for the Service. These should be set up in a suitable location. Swisscom recommends using an electrical/IT partner or the Swisscom installation service for installation. If an IT partner is involved in the order and/or installation of inOne SME office, the IT partner will automatically receive the same access as Swisscom to the router and the customer infrastructure or configuration platform of the customer (incl. WLAN key), for all locations of the customer.

3.1.3 Fixed IP address option

Prior to installation, the Customer shall provide Swisscom with the necessary information relating to the use of the public IP addresses for RIPE (www.ripe.net) in accordance with the RIPE guidelines.

3.2 Business telephony app/client

3.2.1 Conditions / Devices

General information

The business telephony app/client is available only through the present Service and can be used only on a smartphone or personal computer.

Choice of correct mobile subscription

The Customer shall obtain information on which Swisscom mobile subscription is suitable for the requirements involved. The Customer shall be notified of which subscriptions are suitable and supported, and these can be found on the homepage.

Devices/software that may be used

The only versions of software that can be used are those that are available from and have been approved by Swisscom. The software versions recommended are specially tailored to the Service. Swisscom develops the software for PCs, tablets and smartphones. In order to wake up the app from the energy saving mode and to ensure the availability for incoming calls, a network-based wake-up service ("push notification") from the respective app store operator is used. The Customer shall be notified of which devices and software versions are supported, and these can be found on the homepage.

Use of non-recommended or non-approved software

It is not permitted to use software that has not been recommended or approved. Should the Customer nevertheless use non-recommended and/or non-approved software or configurations, there is an increased risk that the Business Telephony app/client will not function or will not function correctly. If Swisscom is unable to provide support for the overall system or if other customers are affected, Swisscom reserves the right to suspend provision of its service without being required to issue prior notice of such and/or to terminate provision of its service with immediate effect for good cause. The Customer shall be liable for any loss or damage arising out of and in connection with such.

3.2.2 Access data, passwords

The Customer shall bear full responsibility for the use of access data and passwords. The Customer must take effective measures to prevent any misuse. In particular, passwords must be chosen carefully, changed (or arranged to be changed) regularly and stored safely.

3.2.3 U.S. Export Administration Regulations

This software is subject to the U.S. Export Administration Regulations and other U.S. law, and may not be exported, re-exported, or transferred to certain countries (currently Cuba, Iran, North Korea, Sudan and Syria) or to persons or entities prohibited from receiving U.S. exports (including those (a) on the Bureau of Industry and Security Denied Parties List or Entity List, (b) on the Office of Foreign Assets Control list of Specially Designated Nationals and Blocked Persons).

3.3 Fault localisation and faults outside the Swisscom network

Swisscom shall not cover any costs that have arisen due to the Customer's commissioning of a partner to localise and/or rectify any faults in the Service.

Should Swisscom's investigations reveal that a fault is located outside of the Swisscom network, e.g. in the Customer's infrastructure (in-house installation, PC, mobile, tablet, etc.), the hotline can provide the details of a partner for further on-site support should the Customer so request. If Swisscom is called in to rectify a fault where the cause is located outside of the Swisscom network, the costs may be charged to the Customer.

4 Installation

4.1 General information

In principle, the Service may be installed by the Customer itself. The Customer may have a partner carry out the - installation or have it carried out by Swisscom (subject to a charge), which is particularly recommended in the case of ISDN installations.

4.2 Installation by the customer or an IT partner commissioned by the customer

In this case, the IT partner or Customer shall bear sole responsibility for the correct technical installation of the Service on the Customer's premises. The IT partner is not a Swisscom auxiliary partner, and Swisscom shall not enter into a simple partnership with it. The Customer shall be responsible for coordinating the work with the IT partner and shall bear all costs incurred by the IT partner.

In the case of this type of installation, the Customer shall indicate in the order the date on which it requires that the Service be available for use ("available-for-use date"). The Customer shall be notified of this date in writing. Swisscom shall endeavour to adhere to the available-for-use date. However, it cannot provide any guarantee in this respect. Swisscom shall inform the Customer as soon as the Service is available for use.

4.3 Installation by Swisscom

Swisscom is commissioned by the Customer to carry out the necessary modifications. The Swisscom technician shall carry out the activities laid down in the installation order issued to Swisscom. This shall be drawn up in accordance with the Customer's requirements and the costs incurred communicated to the Customer.

In the case of this type of installation, the Customer shall indicate in the order the required installation date. The installation date shall be the date on which the Swisscom technician travels to the Customer's premises and commences with the work in question. This date shall not be construed to be the date of completion of all the work in question. The Customer shall be notified of the installation date in writing.

Any work that the Customer requires that is not included in the installation order must be requested in an additional new order. As a rule, a new date must be agreed for the work in question. The Customer shall not be entitled to require that this additional order be carried out immediately after completion of the agreed installation order.

4.4 Installation of the Business Telephony app/client

Following installation of the Service, the Customer may carry out installation of the Business Telephony app/client via the Customer Centre.

The user may use the information provided to select, download, install and register for the required Business Telephony app/client version on the appropriate download website. The Customer shall be responsible for carrying out the installation for the individual users. Swisscom shall not assume any costs incurred in connection with third parties. The Business Telephony app/client can also be installed by Swisscom (service subject to a charge).

4.5 Existing customers

For all installation variants, switching to the Service may cause a noticeable break in the availability of Internet access and telephony. Depending on the technical situation, this break may last for up to one-and-a-half working days. In such a case, the customer shall not be entitled to any damages or compensation from Swisscom.

swisscom

4.6 Implementation condition

If, in spite of positive feasibility studies (on the part of both the Customer and Swisscom) and order confirmation, it is found during implementation that the Service cannot be established due to unforeseen technical reasons or disproportionately high costs, Swisscom's contractual obligation shall cease with immediate effect. In such a case, the Customer shall not be entitled to any claims for replacement or compensation from Swisscom.

5 Prices

5.1 General information

Current prices (one-time and recurring charges) relating to the Service can be found at www.swisscom.ch/inonesme. One-time charges include activation and installation charges. Recurring charges include subscription and usage fees.

The obligation to pay shall begin on the day following activation of the Service, and shall also apply in cases where the Service has been activated but cannot yet be used due to delays for which Swisscom is not responsible.

5.2 Information regarding usage fees

Separate rates apply in particular in connection with calls abroad, teleconferencing, business numbers (e.g. 09xx/08xx), short numbers, directory services including call forwarding and calls with cards. When the Business Telephony app/client is used, the normal charges for the Service apply. Additional costs may be incurred with roaming and the use of fee-based WLAN hotspots. Additional costs may also be incurred within Switzerland if an unsuitable mobile phone subscription is used. Such additional costs shall be charged to the mobile phone bill. Swisscom's homepage provides information as to which mobile phone subscriptions are suitable.

5.3 Noticeable cost trend

In the interest of protecting the Customer, Swisscom reserves the right to block access to the Business Telephony app/client in the event of abnormal developments in the charges incurred by the Customer. The blocking will only come into force if Swisscom is unable to make contact with the Customer, and can be revoked again by the Customer getting in touch with Swisscom in writing or by phone.

6 Conclusion of contract, minimum service period and termination

6.1 Conclusion of contract, entry into force

The first time the customer uses the offer, he is prompted to accept the contractual terms and conditions as well as the minimum service period (12, 24 or 36 months) laid down when placing the order for the Service. The Customer is responsible in respect of Swisscom for ensuring that this first-time use is carried out by the Customer or a party authorised by the Customer. Any pre-existing individual contracts held by residential or SME customers in connection with the fixed network (EconomyLINE, MultiLINE ISDN, BusinessLINE ISDN) and the Internet (DSL packages for residential customers and Business Internet Light for business customers) shall be replaced at such time by these new, unified contractual provisions.

6.2 Notice periods and minimum service period

In service overviews and order confirmations from Swisscom, the minimum subscription period for services and options (excluding promotions) can be shown under the heading "Duration". Termination is possible with two months' notice by the end of a month, though to no earlier than the end of the minimum contract term. In the event of premature termination, the charges due up to the expiration of the minimum contract term shall be owed and

swisscom

become due for payment immediately. In the event of a switch within the service portfolio (“inOne SME office”), the existing minimum service period will be resumed under the new Service.

6.3 Termination

Termination of the Service shall automatically result in the termination of all options.

7 Changes to prices and services and discontinuation of the Service

Swisscom reserves the right to amend its prices, services, Special Terms and Conditions and offer conditions at any time. Swisscom shall notify the customer of any changes in a suitable manner (e.g. on the invoice or by e-mail) at least 60 days in advance. Should Swisscom increase its prices such that this leads to a higher overall cost for the customer, or should Swisscom significantly change a service purchased by a customer to the disadvantage of the customer, Swisscom shall inform the customer on time and in advance, and the customer may cancel the affected service (e.g. in the event of options, only these, but not the underlying service) prematurely up until the change enters into force and without any financial consequences or other claims. If it fails to do so, it will be deemed to have accepted the changes.

The currently valid terms and conditions can be viewed at www.swisscom.ch/b2b-legal or www.swisscom.com/inonesme.

Changes to and discontinuation of the Service shall be governed by the GTC and the Special Conditions.
