

In order to ensure a secure web and cloud experience, data traffic must be effectively monitored, controlled and secured. Our scalable proxy is designed to secure your web communications and accelerate your business applications.

The MSS-i Managed Proxy offers a single, powerful web security solution that delivers world-class threat protection.

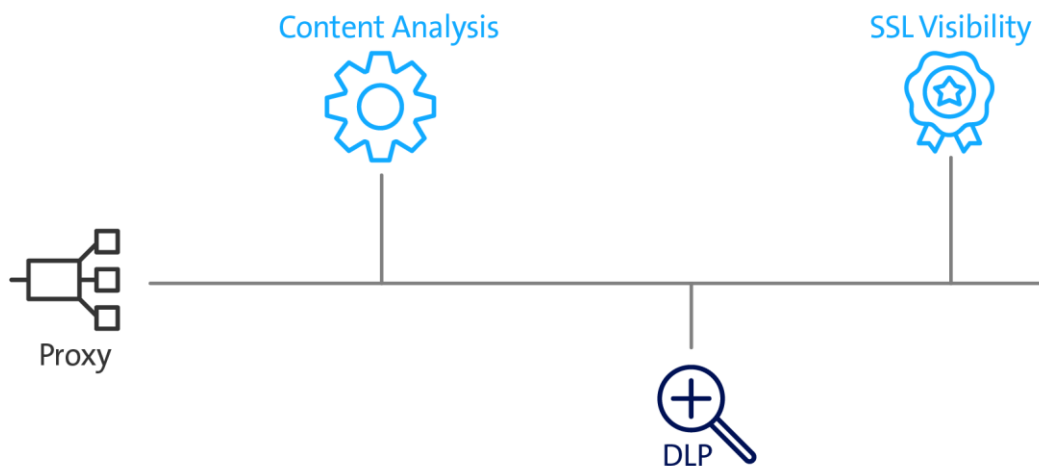

What is a Managed Proxy?

With MSS-i Managed Proxy, web traffic is terminated at the proxy and all downloaded and uploaded objects are processed through multiple layers of security in a single efficient pass. The solution starts by eliminating well-known threats, which reduces the amount of traffic that needs to be processed by any subsequent, more CPU-intensive security engines. The solution offers inspection and validation of SSL traffic, user authentication, advanced real-time web filtering, bandwidth management, multi-layered deep content inspection and analysis of malware.

Your benefits with MSS-i Managed Proxy

- Our MSS-i Managed Proxy provides control over web and cloud usage
- Delivers visibility into encrypted traffic
- Accelerated cloud application performance
- Supports real-time URL ratings
- Works seamlessly with best-of-breed technologies, including anti-malware, anti-virus (AV), blacklist and whitelist engines from a variety of vendors, as well as static code analysis

The MSS-i Managed Proxy service is operated in the Swisscom Security Operation Center, which offers round-the-clock support from qualified experts and threat intelligence that is optimised for Switzerland. It is the ideal security solution for Swiss companies.
