

Exchange unlimited data with EDI Transaction Management

The Swisscom clearing centre ensures the transmission and conversion of various data and document formats. You communicate with your buyers and suppliers via a single interface. The Electronic Data Interchange – or EDI for short – is established throughout Europe and the world and is becoming increasingly important.

The electronic exchange of orders, order confirmations and invoices has been a strategic objective in many companies for quite some time. This is because it allows processes to be handled efficiently and cost-effectively, without media interruptions. The clearing centre acts as a communication hub, enabling companies to establish simple direct connections to their trading partners.

Benefits and advantages of EDI Transaction Management

Future-oriented

Forward-looking services based on insourcing and outsourcing technologies.

Optimised working processes

Strong simplification of communication channels in operations with a single point of entry.

Support GS1 ideal messages

The defined ideal message bases GS1/ECR/EAN from major Swiss commercial enterprises are supported.

Global community

Our clearing centre allows you to reach virtually any national and international EDI trading partner thanks to interworking agreements.

Protect investments

The available infrastructure is used, thereby protecting existing hardware and software investments.

Optimal extension

Possible combination with other services in e-procurement.

How EDI Transaction Management works

For whom is EDI Transaction Management suited?

EDI Transaction Management is aimed at companies that want to map their entire procurement and invoicing process electronically, without any media interruptions. With a single point of contact, you create an efficient and effective connection with your trading partners. This reduces process and transaction costs significantly.

Our clearing centre supports various transmission protocols and document formats. The clearing centre applications run in a Swisscom data centre managed according to modern security criteria. The high standards set on our data centres ensure the absolute confidentiality of your data and smooth operations.

EDI Transaction Management at a glance

<p>Range of services</p>	<p>Swisscom services Swisscom ensures access to the platform via various transmission protocols, guaranteeing correcting document routing.</p>	
<p>Clearing centre</p>	<p>Routing, conversion and mapping You send your documents to the clearing centre, which forwards them to the right recipients based on addressing.</p>	
<p>Centralised</p>	<p>Document tracking The tracking tool makes it possible for you to search for documents quickly and easily and query their status.</p>	
<p>Web-based</p>	<p>WebEDI The WebEDI covers the entire order and invoicing process and already fulfils the requirements for e-invoicing today.</p>	

Individual B2B integration: Where electronic data interchange is used intensively, integration between your order processing system, the clearing centre and the order systems of your customers or suppliers is recommended. The requirements for the integrated exchange of business documents are met as part of a joint integration project. The goals and content of this project are coordinated and defined individually with you in advance.
