Centro Business 2.0

How to prepare your router for the latest fibre optic technology

(Deutsch auf der Rückseite)
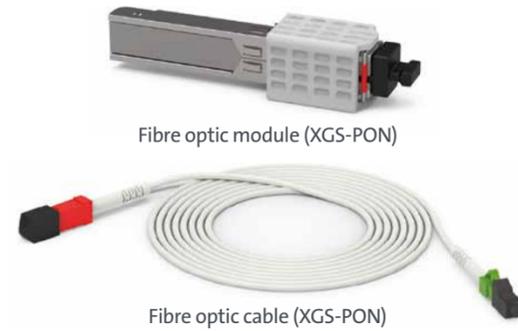

KKD-JM (PMK-UID) 11042416 11/2019 EN

Start

You received:

Fibre optic module (XGS-PON)

Fibre optic cable (XGS-PON)

Fibre optic cables are delicate. Do not bend or touch the unprotected ends.

1

The Fibre optics Kit works only with Centro Business 2.0.

2a

If you are upgrading an existing installation, switch off the router.

2b

Remove the fibre optic or DSL cable from the socket.

B 123.456.789
1 2 3 4

Take note of the slot and pull out the green end of the fibre optic cable.

Installation overview

2c

Now remove the fibre optic cable and module from the Centro Business 2.0 …

… or the DSL cable.

TEL 2

7

You surf with the latest fibre-optic technology.

Switch on the Centro Business 2.0 and wait 5 minutes.
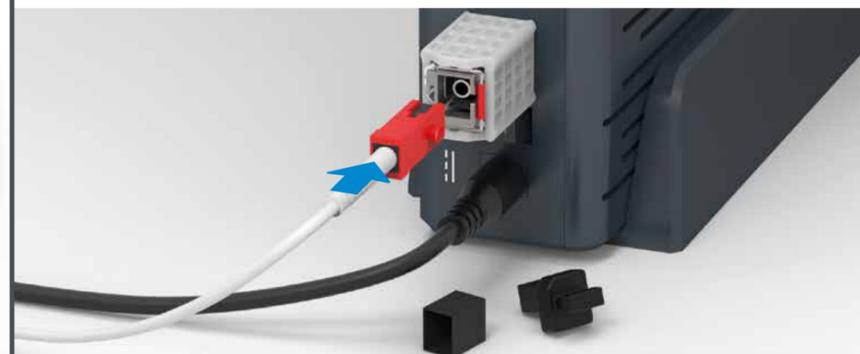

6

5

Connect the other end of the fibre optic cable to the fibre optic socket

B 123.456.789
1 2 3 4

Open the slot at the fibre socket which we have specified by letter (or as in step 2b). This is usually slot 2 (rarely 1).

4

Connect the new fibre cable to the Centro Business 2.0.

Remove the protective caps and connect the red end of the fiber cable with the Centro Business 2.0.
The cable is sensitive. Do not touch the ends.
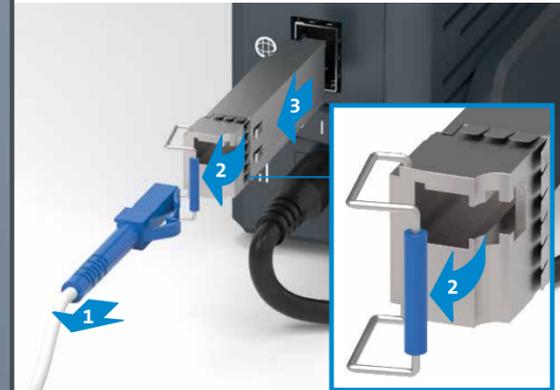

3

Insert the new fibre optic module.

Insert the fibre module into the slot until it snaps into place.
