The digital transformation is driving companies and organisations to increasingly look for innovative solutions that optimise security, efficiency and transparency. The aim is to make well-founded, data-based decisions in real time and proactively minimise risks.

Maximum control and safety through smart drone operations - available at any time to make data-based decisions quickly and accurately. With Drones-as-a-Service (DaaS), Swisscom's drone network offers a solution that utilises the latest technology to increase safety, efficiency and transparency.

Automated drone operations are flexibly adapted to individual requirements. DaaS combines drone technology, secure network infrastructure and comprehensive services. Real-time transmissions and the highest security standards guarantee an all-round carefree package from planning to data processing.

- 
Switzerland-wide drone network
 Benefit from a professional drone company that enables operations to the highest standards throughout Switzerland.
- 
All-round service for customers
 Swisscom Broadcast takes care of planning, operation and evaluation - you concentrate on your core competences.
- 
Efficient data acquisition in real time
 Collect precise data from the air, ideal for inspections, monitoring or emergency management.
- 
Maximum safety and reliability
 Thanks to well thought-out safety mechanisms and state-of-the-art technology, operations are carried out safely and can be planned.

How Drones-as-a-Service works

Facts & Figures

Basic services

Our basic services cover all essential requirements for drone operations:

- Automated drone flights with state-of-the-art technology (EU manufacturer Nokia)
- Creation of flight routes and deployment plans
- Regular monitoring and maintenance of the drone systems
- Operational reliability thanks to the Swisscom network: best connectivity and performance thanks to Swisscom's nationwide 4G/5G network
- Complete handling of administrative processes such as applying for a flight licence (SORA) from the FOCA.
- Ensuring compliance with data protection guidelines: VBS certification (including EPS-certified pilots)
- Provision of real-time video feeds (live view) for immediate insights and analyses
- Access to the drone portal with intuitive dashboard: The portal offers a wide range of functions, including viewing and editing visual and thermal data, mapping tools and detailed logs of completed missions.

Optional services

In addition to the basic services, we offer customised extensions:

- Adjustments or extensions to flight routes and deployment plans
- Analysing and processing high-precision air data
- Expanding the use of drones for specific industry requirements such as energy, infrastructure or public safety
- Training for the use of automated drone technology

Additional services

All-round support for your drone solutions:

- Consultancy and planning for the implementation of drone systems
- Ongoing support with regulatory requirements and authorisations
- 24/7 hotline for technical support and emergency operations
- Extended data hosting and processing service via Swisscom infrastructures (data storage in Switzerland)
