5G solutions are not just revolutionising value chains and business models – they are also reshaping entire companies and industries with their state-of-the-art, flexible and fast wireless connectivity.

5G Mobile Access

Location-independent Internet access via the 5G mobile network. The expectations of SMEs are constantly increasing when it comes to a high-performance communications infrastructure – including reliable networking and a secure Internet connection.
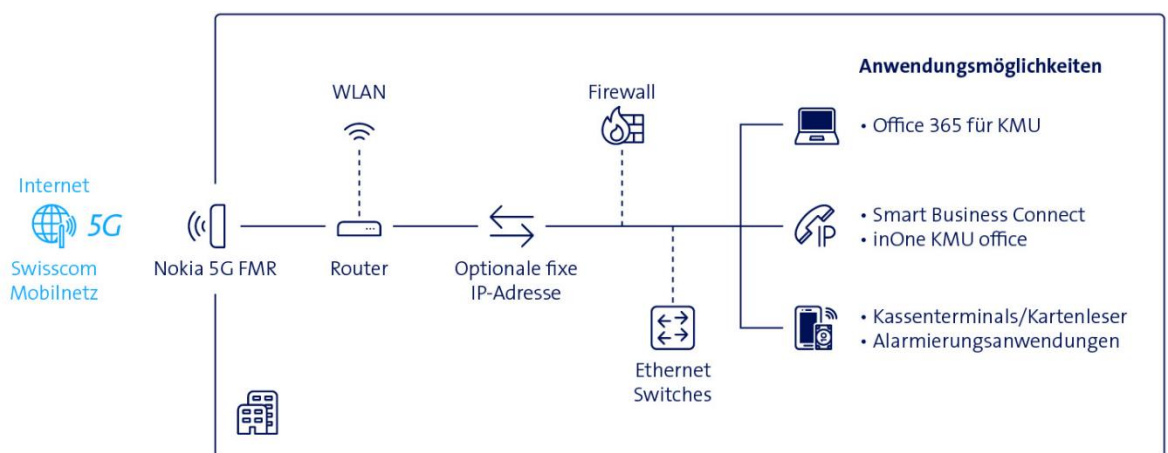

What is 5G Mobile Access?

5G Mobile Access offers you secure Internet access via the 5G mobile network in places where it is not worth setting up a fixed Internet line or where the Internet bandwidth is insufficient. If required, 5G Mobile Access can be expanded with a network solution (Business Network Solutions) or supplemented with telephony.

Your benefits with 5G Mobile Access

- Gives you a high-performance Internet connection at any location.

- Independent of a copper or fibre-optic connection: you are connected via Swisscom's 5G mobile network.

- Opt for a flexible and location-independent installation[1]. The mobile solution is ideal for temporary locations such as construction sites, pop-up stores and events.

- Ensures a secure Internet connection. If necessary, your Internet connection can also be integrated into the company network.

You can benefit from Swisscom's proven installation and support services, including state-of-the-art routers. Or leave the installation to a certified IT partner, so you can concentrate fully on your day-to-day business.

[1] Important: service quality can only be guaranteed at the commissioning location. If you change location, we recommend checking the mobile network coverage (5G) first.
