

Data Forwarding enables you to move metrics, log and event data to the right destination in compliance with data governance rules.

The Data Forwarding Service guarantees reliable and secure data routing from Swisscom to the customer.

What is Data Forwarding?

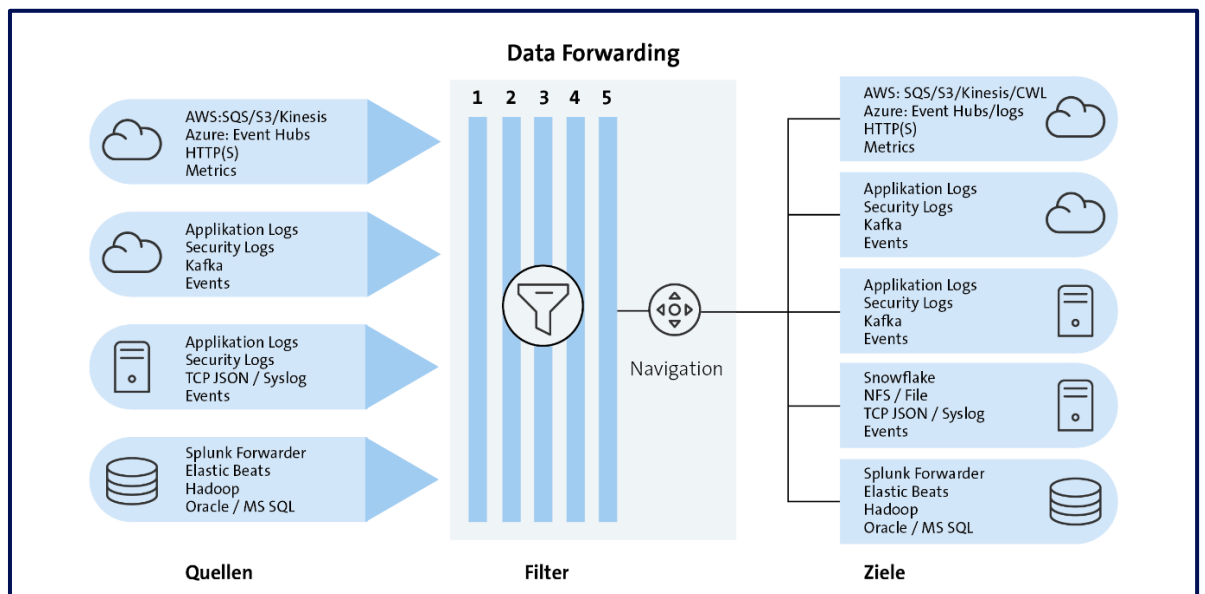

Data Forwarding, part of the Data Insights Service, is used to send data hosted by Swisscom to the customer's own environment in accordance with data governance criteria.

Data Forwarding aids in the implementation of data routing and data filtering, which allows machine data to be routed from different sources to different destinations. At the same time, data flow is transformed, so it can be enriched with additional context, content can be protected and costs can be kept under control.

Your benefits with Data Forwarding

- Forwarding of data with one dedicated tool
- Saving of additional proprietary software and in-house developments for data transmission
- Data routing with customer-specific security standards in accordance with data protection requirements.
- Separation of relevant core data and unneeded, recurring data (filtering)
- Suppression of double events or sampling (filtering)
- Works with most standard formats and sources

The solution at a glance

Facts & Figures

For Data Forwarding, Swisscom offers a multifunctional, secure service that works with any data source. Data Forwarding can be ordered on its own with no additional benefits or in conjunction with Swisscom's Data Insights Service (e.g. for additional indexing and storage of sensitive data).

 Basic services	Multitenant platform for data forwarding
	Data forwarding based on one dedicated data source
	Data routing from one sourcetype to one destination
	Data forwarding with basic filter function
	Data cache for target data on the data forwarding platform
	Customer-specific fulfilment of standard security requirements
	End-to-end data encryption
 Optional services	Customer-specific platform for data forwarding
	Redundant customer-specific platform for data forwarding
	Provision of additional data sources
	Data enrichment with additional information (timestamp, sources)
	Additional data storage on the Swisscom Big Data Platform (at least one month retention time)
	Expansion of data cache on the data forwarding platform (Volume based)
 Additional services	Forward data to the Swisscom Big Data Platform for data analytics (Data Insights Service)
	As part of the customer-specific service development process, innovation workshops with data insight experts on consulting and engineering services may be organised.
