

As a company, you rely on secure and available communication via e-mail at all times. In addition to ever more spam and viruses, targeted attacks are carried out via e-mail that threaten your company. Mail Security lets your employees focus on their jobs. Because threats such as viruses, trojans and phishing are blocked before they reach your network.

Best protection from spam, viruses and phishing for all mail servers. No administration costs, no harmful e-mails, no worries.

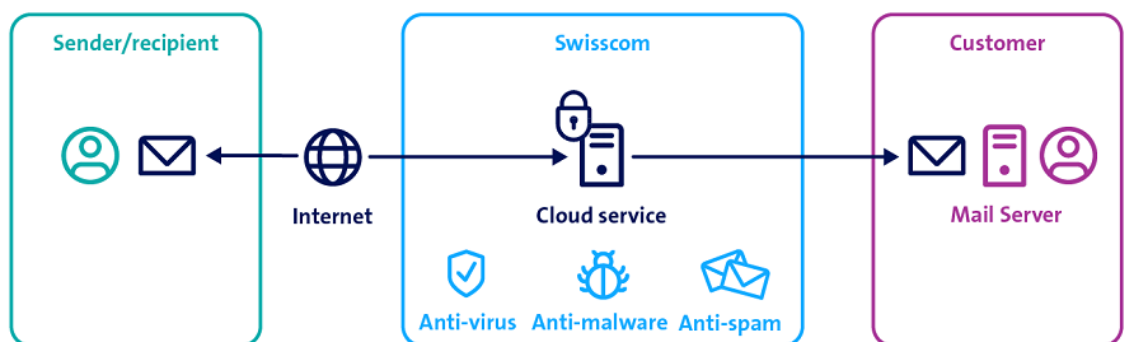

What is Mail Security?

Mail Security from Swisscom is the complete cloud-solution for security, validation and management of e-mails and works with all mail servers. Multistage filter process and innovative technologies guarantee the best detection rates and reliability. Mail Security can be set up for existing mail servers quickly and easily. Common work steps for administrators are also resolved intuitively for customers in the Admin portal. With Mail Security, you secure your e-mails professionally and prevent threats reaching your network through e-mails.

Your benefits with Mail Security

- All-round protection
Best detection thanks to multi-stage scanning engines, filtering and sandboxing. With updates every minute, your protection is always up to date.
- Cloud solution with cost savings
No hardware or software needs to be installed. The cloud solution is cost-effective, since you only pay for what you actually use (per mailbox).
- ISO 27001 certified data centres
Mail Security is operated in redundant, secure Swisscom data centres in Switzerland.
- Protection against data loss
If your infrastructure fails, your e-mails are stored for up to 7 days.
- Designed for Office 365
Comprehensive security and compliance for Office 365. Automatic synchronisation between Mail Security and the Microsoft Cloud.

How Mail Security works

Facts & Figures

Basic services

Spam and virus filter

99.9% of spam e-mails and 99.99% of viruses are reliably recognised by combined virus and phishing filters. Users receive spam reports automatically.

Intuitive control panel

The service is managed centrally via the Admin portal. You can fully control your own mail traffic.

Content filter

Tailor-make your content filter to block unwanted attachments and newsletters and limit the size of incoming and outgoing e-mails.

Comprehensive statistics

Keep an overview of your mail traffic and the effectiveness of your spam filter.

Options

Advanced Threat Protection (ATP)

ATP offers complete protection from targeted and highly complex threats such as ransomware, blended and targeted attacks, and phishing.

ATP uses sandboxing, highly innovative, forensic analysis engines, URL rewriting and URL scanning to identify harmful e-mails. When attacks occur, the user is informed in real time.

E-mail archive

Archive external and, optionally, internal e-mails for as long as the customer wants. Comprehensive search functions and full-text indexing in the Admin portal. IOS, Android and Outlook plugin also available.

E-mail encryption incl. compulsory TLS

E-mail encryption and signatures using separately ordered certificates. Central policy management in the Admin portal. Certificate management by Mail Security.

S/MIME certificates

Mail Security provides the customer with the certificates required for signatures and encryption and renews them before they expire.

365 Total Protection

Seamlessly integrated security management for Office 365. Compliance, e-mail and data security as default setting.

E-mail signatures and disclaimers

Central management of e-mail signatures and disclaimers using Active Directory, including simple WYSIWYG editor.

Log streaming

Sends log data from Mail Security to your SIEM for central analysis of your security-relevant events.

Supplementary services

Support

24/7/365 support via web ticketing and phone
