

Business success increasingly depends on a functional IT infrastructure. A security assessment helps you to identify vulnerabilities in your IT and determine and minimise risks.

We analyse your IT and provide you with an objective picture of possible security loopholes as well as an assessment of the risks. This is then used as a basis for providing recommendations for action to improve your IT security.

What is the Security Assessment for SMEs?

The Security Assessment provides a benchmark analysis of your SME's IT security. Over a ten-day period, your ICT infrastructure is subjected to a vulnerability scan, which involves checking for vulnerabilities and erroneous configurations. An analysis is also conducted of technical and organisational IT security measures. You will receive a detailed final report as well as a raft of measures to help you improve the IT security of your company.

Advantages of the Security Assessment for SMEs

- **Product-independent recommendations:**
We provide an impartial, independent service, identifying vulnerabilities in your IT systems and risk factors, highlighting a need for action and providing a starting point for improving IT security.
- **Expert advice**
Receive sound advice from our seasoned security experts. We have the interdisciplinary internal expertise to cover all of your needs. We can, on request, also help with the creation of a security concept and the implementation of measures.
- **Solid basis for your IT security concept**
The Security Assessment provides a solid basis for the development and implementation of an IT security concept as well as for investment and project planning.

Facts & figures

Security Assessment basic package

CHF 4,200.00

| | |
|-------------|---|
| Description | <p>The IT assessment by our security experts comprises two steps: structured interviews and a software-based scan of your ICT environment (vulnerability scan).</p> <hr/> <p>ICT infrastructure vulnerability scan</p> <p>Over a 10-day period, your ICT infrastructure (server & network components, devices, software) will be scanned for vulnerabilities and erroneous configurations (e.g. firewall, network, network zones, LAN, the latest patches and firmware). You will also receive a comprehensive inventory report of your ICT infrastructure.</p> <hr/> <p>IT security analysis of the IT organisation and business processes</p> <p>On the basis of structured interviews, our security experts analyse your company's IT security level. The following will be discussed and analysed:</p> <ul style="list-style-type: none">– IT organisation: How are responsibilities for operation, maintenance and protection of IT managed? What user guidelines have been defined?– IT safety measures: What technical measures is the company deploying to protect its network and ICT infrastructure? How is your IT protected against physical access and incidents (e.g. intrusion, fire, water damage)?– Access protection What policies and guidelines are in place to prevent unauthorised access to your systems?– Data backup & business continuity: How is data backed up and how do you comply with legal retention obligations? Can business activities be maintained in the event of an IT crisis??– Data protection & regulatory requirements: Does your IT infrastructure comply with data protection and other regulatory requirements?– Raising awareness among employees: How are employees trained on security and data protection requirements? <hr/> |
| Result | <p>You receive an electronic copy of a detailed final report of your company's current IT security situation, including a raft of measures to improve IT security. You will also receive an inventory report of your ICT infrastructure including network landscape & topology as well as a risk assessment of the identified vulnerabilities and erroneous configurations. The final meeting will take place at your site or online.</p> <hr/> |

Optional extra

Management presentation

CHF 750.00

Our security experts prepare the results and recommendations for action from the basic package in the form of a management presentation, which is delivered to your management team in person on site. The focal points of the presentation can be defined individually according to your needs.

All prices include VAT.
