

# Security Assessment for SMEs

Factsheet

**swisscom**

Enable, drive and protect  
your business.

# We analyse your IT and provide an objective picture of your potential security vulnerabilities and risks.

**The Security Assessment analyses the IT security of your SME. Receive competent advice from experienced Swisscom security experts and a sound basis for developing and implementing a successful IT security concept.**

The assessment is aimed at all SMEs who would like to optimise their company's IT security. Over around ten days, we complete a vulnerability scan

of your company's ICT infrastructure, checking for vulnerabilities and erroneous configurations.

We also analyse technical and organisational IT security measures. You receive a detailed final report plus a list of recommended actions to help improve your company's IT security.

Use the insights from the security assessment as the basis for your security roadmap and protect your IT systems.

## Product-independent recommendations

We provide an impartial, independent service to identify IT-related vulnerabilities and risk factors and provide a starting point for improving your IT security.

## Expert Advice

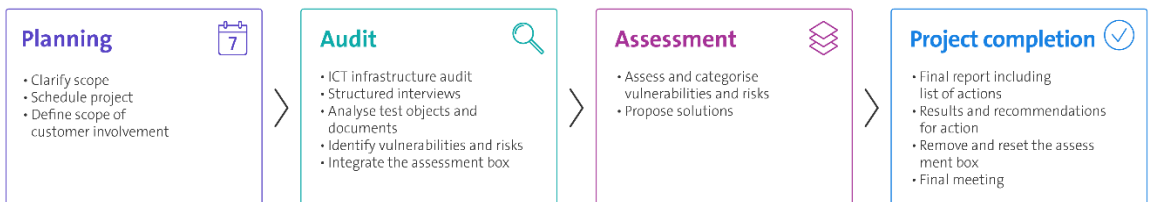

Receive sound advice from our seasoned security experts. We have the interdisciplinary internal expertise to cover all of your needs. We can, on request, also help with the creation of a security concept and the implementation of measures.

## Sound basis for your IT security concept

Our Security Assessment offers you a sound basis for developing and implementing a successful IT security concept as well as for investment and project planning.

## How the Security Assessment for SMEs works

## Facts & Figures

### Basic services

- Structured interviews based on ISO 27001, BSI and the ICT minimum standard
- Among other things, the interviews will focus on IT organisation, IT protection measures, access protection, data backup and business continuity, data protection and regulatory requirements, raising awareness among employees.
- Software-based scan of your ICT infrastructure with a vulnerability scan
- Comprehensive risk assessment of identified vulnerabilities and configuration errors.
- You receive an electronic copy of a detailed final report of your company's current IT security situation, including suggestions for improving IT security.
- Final meeting or presentation at your site or online

### Supplementary services

- **Security Awareness Training:** With Security Awareness Training from Swisscom, you will increase employee awareness of security and successfully defend against cyberattacks. With targeted online training and simulated phishing attacks, your workforce receives effective training on the safe use of e-mail, the Internet and IT.
- **Penetration Testing:** Detailed assessment of the resilience of your IT infrastructure to malicious attacks. We use different methods to test for vulnerabilities and security loopholes in a previously defined application, system or entire infrastructure from an attacker's perspective.
- **Digital Risk Protection (DRP):** The Digital Risk Protection module provides the customer with an external view of potential security threats by monitoring public and hidden information sources (e.g. dark web, blogs, social media platforms, etc.) for two weeks. The aim is to retrieve sensitive information about the company, its VIP members and brand protection. Finally, the identified risks are discussed with the customer and presented in a comprehensive report.
- **Tabletop Exercise:** Tabletop exercises are simulation exercises where external service providers and participants test their skills and plans for potential crisis situations such as ransomware attacks. Scenarios and problems are played out on an interactive platform under the guidance of the security experts.
