

# On the road to operational process excellence: Analyse, optimise, document and monitor your business processes with SAP Signavio Transformation Suite

## Business process management – boost your business success

In a volatile business environment with growing regulatory requirements, compliant, digitised and optimised processes are not only wanted – they are decisive. Thus, business process management (BPM) is increasingly becoming of interest to companies. Our goal is to guide you on your path to operational process excellence. Signavio Transformation Suite is the innovative BPM software solution from SAP, which can be integrated into other SAP modules. Together, we launch the solution in your company and configure your process landscape.

With process mining we take a close look at your current processes, optimise them and develop a process monitoring system.

Processes are more than just operations; they are brought to life by people. That is why developing a dynamic process organisation is a key part of a successful business process management. We support you to overcome organisational challenges and work together to find effective change management actions to embed a process mindset in your organisation. With your BPM project you will lay the foundation for continuous process optimisations and lasting business success.

## How you benefit from business process management with SAP Signavio

### Increase efficiency

Reduce costs and increase efficiency by identifying and eliminating bottlenecks and unnecessary steps within business processes.

### Improved quality and consistency

An optimised, well managed process improves the quality and consistency of products and services

### Greater flexibility and agility

Adjusting and optimising processes allows you to respond faster to changes.

### Integration in other SAP solutions

Signavio can be integrated seamlessly in other SAP solutions such as Cloud ALM, Solution Manager, Enable Now or BTP.

### Greater transparency and control

The documenting and monitoring of processes makes them more transparent and immediately reveals any problems.

### Reduced costs

Save costs by improving efficiency.
