

Do your employees use several mobile devices when they are on the move? Do they want to stay reachable by phone on an additional mobile device that they use for other activities? Then Multi Device for NATEL® go is the optimum solution for your company.

Several devices – only one contract and telephone number Simultaneous surfing and phone calls regardless of device

What is Multi Device?

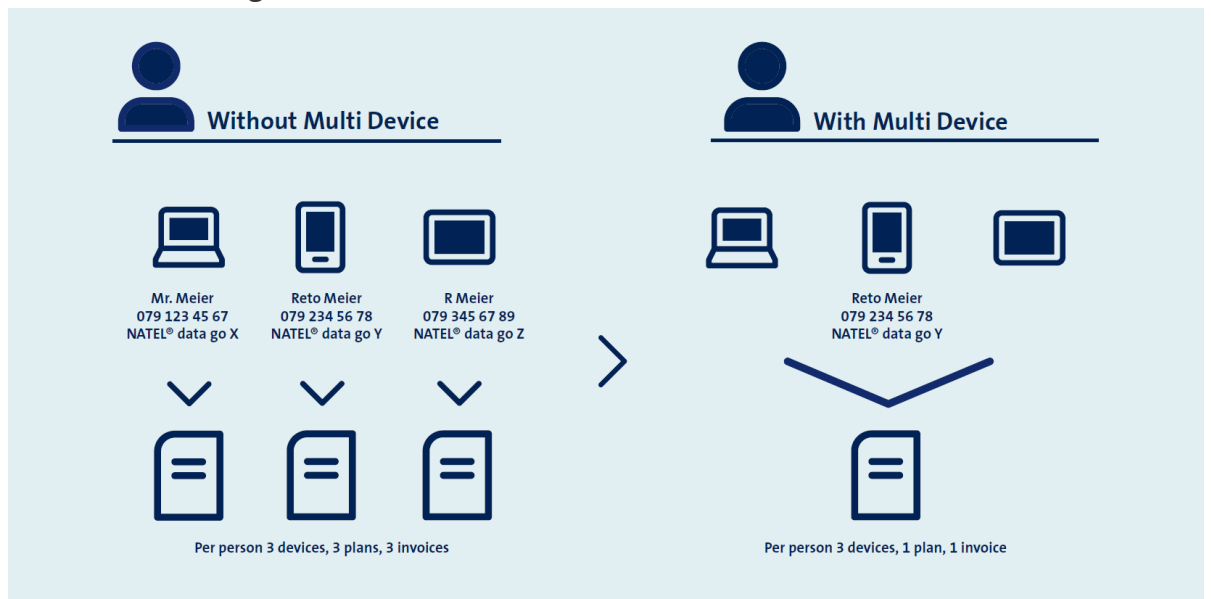

Multi Device is available as an option for NATEL® go. It allows up to five additional devices to be used with all flat-rate plan types (go Swiss, go Neighbours, go Europe and go Global). The additional devices communicate under the conditions of the subscribed NATEL® go price plan. Spare your employees the time-consuming search for hotspots and the complicated set-up of tethering while allowing them to access an existing tariff with several mobile devices.

How you benefit

Multi Device provides personal, simple, device-independent access to all services over the mobile network.

- One contract, one bill and one telephone number for several devices
- Simultaneous phone calls, surfing and mailing
- Ensure the availability of employees on all mobile devices quickly and easily.
- Less administrative effort by having just one contract per end user.
- No ordering of multiple tariff options and roaming data packages required. One roaming limit for all devices.
- Personal overview of the mobile devices in the Cockpit (for the end user) and in the Business Center (for the fleet manager).

The solution at a glance

Facts & Figures

Multi Device – in detail

Basic services

Parallel use of several mobile devices (up to five additional devices).

Same telephone number (MSISDN) on all devices.

All devices can be connected to the mobile network at the same time.

Mobile data communication is possible on all devices in parallel.

Incoming voice calls are displayed on all devices with voice functionality (parallel ringing). Settings can be configured by the end user.

Incoming SMS/MMS messages are only sent to the main device.

Devices and SIM management using the Swisscom Cockpit.

Commercial terms

The Multi Device for NATEL® go option is offered in versions for one, two or five additional devices.

The monthly fee for the Multi Device option allows the additional devices to access the mobile network under the conditions of the NATEL® go subscription.

The SIM/eSIM is included in the activation charge for the option.

The option can be terminated at the end of each month.

Billing for the option is from the time of activation. If the option is activated during the month, the accounting will be on a pro rata basis.

Join the digital future with Swisscom

Visionary companies are taking advantage of the opportunities of digitalisation to re-invent the future, and Swisscom is also opening up new areas of business with its numerous innovations.
