

Zscaler Internet Access provides you with a comprehensive cloud security stack. Compared with traditional web security solutions, it simplifies your architecture and saves you money.

With Zscaler Internet Access, your employees are reliably protected from Internet dangers wherever they are, whatever device they are using.

What is Zscaler Web Security?

Zscaler is a web gateway service for your employees. As well as providing protection against malware, viruses and advanced persistent threats, Zscaler allows you to implement company policies through URL filters and regulations on the use of Internet access and Web 2.0 applications. Data loss prevention (DLP) ensures that your organisation does not lose confidential data. The service is operated in Swisscom's secure data centres in Switzerland, while additional gateways in the global cloud are also available as an option.

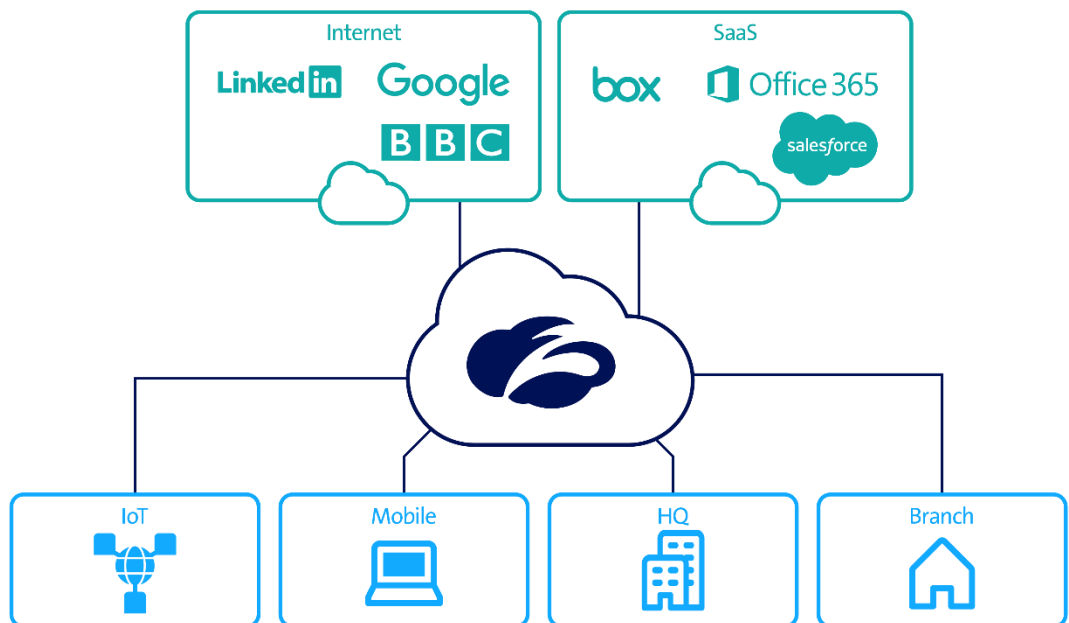

Your benefits with Zscaler Web Security

- Protect your users everywhere, on any device
- Lower complexity and less network infrastructure
- Optimised for Office 365 and other cloud applications
- Complete Internet security across all ports and protocols
- Top performance anywhere in the world, in Switzerland from your connection to the Swisscom backbone

The simple and effective cloud solution

Zscaler Web Security can be set up without great expense or additional infrastructure for your organisation. Ask for a no-obligation quote or test installation.
