

In our modern and digitised world, SMS messages are used in numerous business processes: They help financial institutions with authorisations, alarm centres with alarms, support companies with informing their employees and are also used in mobile marketing.

Send and receive SMS messages world-wide conveniently via your applications

What is Web to SMS?

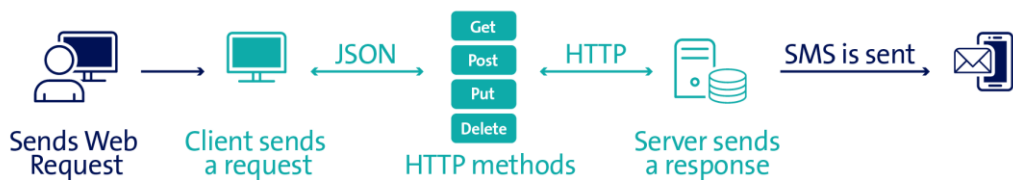

With Web to SMS, you can send national and international SMS messages in the shortest possible time via REST-API or web-application. And SMS replies can be sent conveniently to your e-mail account. This solution is ideal for sending SMS tokens or for mobile marketing, such as distributing information and sending reminders and invitations. The Self Care Portal provides you with real-time reports on which you can evaluate and keep an eye on the traffic at any time. In addition, these can also be exported.

Your benefit with Web to SMS

- No additional infrastructure needed
Send SMS easily from any business application via the standardised REST API or with the Swisscom provided web-application.
- Managed Service
Make use of a well-established Swisscom service. You will not need to carry out any maintenance work whatsoever.
- Simple Handling
You can individually authorise application access and manage this independently via the Self-Care portal.
- Communicate worldwide
Communicate easily and conveniently with your customers all over the world.
- Self-Care Portal for Business Customers
Manage your service simply online. Sent messages are displayed directly in the reporting.
