

# Sweep Base Plan

## Carbon footprint, reduction path & communication on net zero made easy

### Collaborative and transparent approach to climate protection

There are good reasons for SMEs to be transparent about their carbon footprint and reduction path to net zero:

1. The Swiss Climate Act passed in June 2023 requires all companies to achieve net zero by 2050 at the latest.
2. SMEs tend to be part of the supply chain of larger companies, which are increasingly demanding transparency around CO2 emissions from suppliers.
3. Growing numbers of talented professionals are keen to work in companies that are committed to climate protection and sustainability.

As in financial accounting, it is worth using transparent and attractive software to support your efforts to improve your carbon footprint and for your reduction path to net zero. The Sweep Base Plan makes it possible for businesses to use a climate protection platform initially created for large companies at a manageable price.

Take the path to net zero into your own hands with a professional tool and have your measures audited and certified by Swiss Climate experts.

### Your benefits

- ✔ Produce high-quality carbon footprint information using an intuitive and attractive tool
- ✔ Involve employees more easily through questionnaires surveying emissions
- ✔ Define a pathway to net zero with a reduction path in line with SBTi criteria and select suitable measures from a library
- ✔ Easily share results with all employees or with the public via a website
- ✔ Option to have the results audited and certified by Swiss Climate
- ✔ Options to refine the results using further modules (e.g. supply chain) or include additional KPIs for ESG reporting

### Implementing the software in your SME:

-  **Collect the data**
  - Easily collect data with simple questionnaires with emission factors adapted for Switzerland
  - Involve employees by means of questionnaires
-  **Define the reduction path and measures**
  - Define the reduction path to net zero
  - Select reduction measures from a library of prepared options
-  **Share results internally and/or externally**
  - Publish dashboard internally or externally
-  **Options for Swiss Climate certification or expansion to include additional modules and ESG reporting**

### The offering at a glance

#### Cost:

CHF 2,500.– per year
