

As leading trust service provider in Europe,
we enable the most innovative digital
business transaction models.

Identify once – sign multiple afterwards Jurisdiction Switzerland and EU

Smart Registration Service of Swisscom

Swisscom decouples the signature and the identification. Contrary to what is known on the market, Swisscom can use identifications or registrations several times to sign with the Swisscom Signing Service. For this purpose, a person registers at the same time with an authentication means. From now on, only the authentication means for expressing the will is used in the signature process. Depending on the procedure, signatures are possible for months or years after identification.

Suitable to everyone's situation

You can offer your end customers multiple identifications

- in line with the EU or Switzerland jurisdiction in which the signature must take place,
- matching the quality of the signature: qualified (QES) or only advanced (FES)
- suitable to the technical possibilities of the end customer.

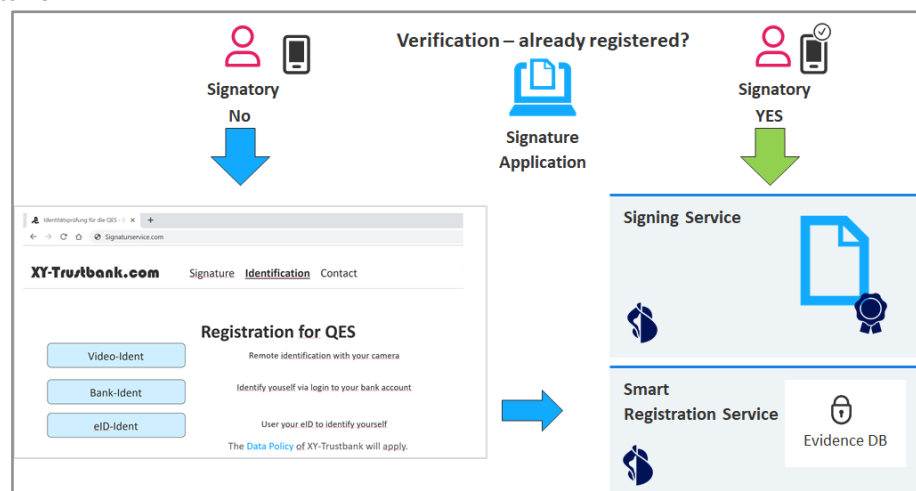

One-stop purchasing from Swisscom

Swisscom selects its identification partners on the market and registers them as external registration authorities. For example, you can set up a portal and select from several registration methods that Swisscom makes available to you as a catalogue. The catalogue contains the signature conditions (quality of signature, jurisdiction, etc.) for filtering. You or your end-user select a method and your end-user is transferred to the identification partner via a web address provided by Swisscom. The latter imports the evidence records to the registration database of Swisscom. In the context e.g. of anti-money laundering it is even possible to obtain a copy of the evidence data yourself.

Registration methods

The following methods are available or in planning:

- Video identification
- Bank identification based on German bank account, or dedicated Swiss banks
- eID of German ID card
- AI based auto identification
- Always new identification methods ...

The information in this document does not constitute a binding offer. We reserve the right to make changes at any time. In this document, Swisscom expresses its opinion and view, also regarding legal assessments but without any guarantee or liability. It is the sole responsibility of each party concerned to carefully study the circumstances themselves and draw their own conclusions. Swisscom recommends that each party consult experts as necessary.

Facts & Figures

 Simple	REST API
