

In the age of digitalisation, more and more applications are cloud-based. Such applications are often detached from a company's own structure, with no access to an e-mail server, for example. With Internet Mail Relay, you can send e-mails to anywhere in the world at any time, wherever you are.

Send e-mails easily and conveniently from your applications – anytime, anywhere.

What is Internet Mail Relay?

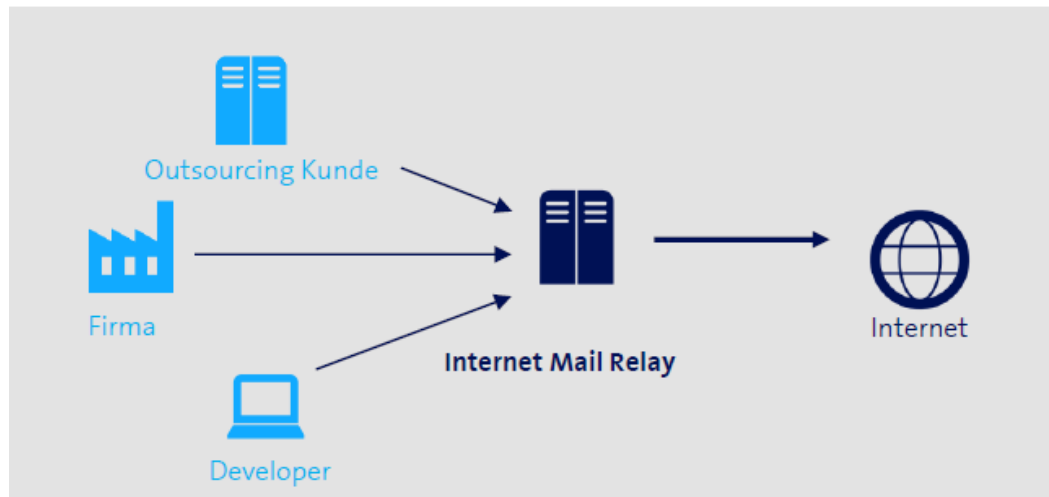

This service enables you to send e-mails securely and efficiently in accordance with your requirements. Possible uses include web applications (order processes, opt-in, etc.), alerting and monitoring applications, script and application outputs or reports.

Available in Small, Medium and Large versions, the service can be up and running within a few minutes of ordering thanks to self-care functionalities.

Your benefits with Internet Mail Relay

- Always up to date
Technologies such as SPF, TLS and SMTP Authentication are supported and available out-of-the-box.
- Managed service
All server components are in Swisscom data centres and the data is stored in Switzerland. The service, engineering and support are operated from Switzerland.
- Easy handling
Manage your configurations independently via the self-care portal. Changes become active in real time.
- Communicate globally
Communicate easily and conveniently with your customers all over the world.

The solution at a glance
