These days, digitisation is changing the way businesses across all sectors achieve success: to survive in today's corporate world, you need to evolve and get on board with the digital revolution.

Turn your business into tomorrow's success story!

Why choose SAP S/4HANA Transformation Factory with Swisscom?

SAP has brought an innovative, future-ready in-memory ERP suite to the market with the launch of S/4HANA. The S/4HANA Transformation Factory from Swisscom SAP Services provides an efficient, low-risk framework and the right tools for migrating existing SAP R/3 systems to the S/4HANA environment. Costing less than traditional migration, the approach to S/4HANA transformation developed by Swisscom also makes financial sense for SMEs. In addition to individual migration, Swisscom also offers the module-based fixed price 'S/4HANA Lean Conversion' package, enabling customers to assemble the options they require from modular components.

SAP S/4HANA Transformation Factory: your benefits

– Experience gained from over 40 successful S/4HANA migration projects

– A modular, structured approach

– Swisscom analysis and migration tools

– Swisscom house-keeping recommendations for the appropriate maintenance of your SAP system

– Swisscom's S/4HANA community demo-box (shared)

– Private sandbox

The Swisscom transformation process comprises a series of six phases which build upon each other and is based on the SAP Activate Methodology.

Overview of SAP S/4HANA transformation phases

SAP S/4HANA transformation phases in detail

Discover

Roadmap for implementation

The S/4HANA Bootcamp provides an overview of S/4HANA and the system architecture which underpins it. Swisscom's S/4HANA experts answer questions and explain the fundamental 'Simplification List' and 'Compatibility Scope' documents. You also benefit from an introduction to SAP Fiori (SAP Fiori Launchpad) and SAP S/4HANA Best Practices.

At the end of this phase, you will have an outline for the implementation of S/4HANA (incl. SAP house-keeping recommendations), a general roadmap and an investment plan. You will have a general overview of the system and application architectures and access to the results from the ERP system scan (HTML access). We demonstrate your operational options and give you access to Swisscom's S/4HANA community demo-box (shared).

Prepare

Preparing for implementation

We work with you to develop a high-level programme and project plan, which covers implementation and the system and architecture plan. We prepare the solution deployment, the Best Practice Business Process Master List and workshop schedule. In addition, we identify areas suited to process optimisation as well as the potential for optimisation through the use of new technologies or by installing standard functions (BPML definition). From a technical perspective, an SAP-RICEF list (Reports, Interfaces, Conversions, Enhancements, Forms) is created, which is used to improve the overall costs estimate.

This is used to establish your implementation approach (Greenfield, Selective Data Transition or Brownfield). You receive a high-level programme and project plan, as well as an investment plan, including licensing requirements, project and hardware costs. If you are preparing an S/4HANA business case, we also offer optional support through business value consulting.

Explore

Drafting the customised solution

On the basis of the implementation approach selected, we work with you to draft your customer-specific S/4HANA solution. This is based on your existing processes and system configurations (Brownfield/Selective Data Transition) or on SAP S/4HANA Best Practice processes (Greenfield).

- Project plan and budget for the Realize & Deploy phases
- Set up S/4HANA development/sandbox systems including Fiori
- Set up clients in the development and/or sandbox system for project work (sandbox transformation (empty shell) including data migration or S/4HANA Best Practice with Best Practice data)
- Definition of data migration
- Process documentation (URS), definition & prioritisation of backlog for the Realize phase
- UX strategy decision
- Various concepts (e.g. training, testing)
- Project scope acceptance

swisscom

Realization

During this phase, we realize your S/4HANA solution on the basis of the definition from the Explore phase. We work through the defined worklist (backlog) with you, give you the opportunity to extensively test the new S/4HANA system and provide everything you need to make your day-to-day operations efficient and secure, thanks to your new S/4HANA solution.

Realize

S/4HANA rollout

- Solution deployment
- End-user training
- Operational readiness
- Cutover plan
- Cutover
- End-user training
- Technical documentation

Deploy

Operation

- Go-live support
- Delivery of documentation
- SAP basic services
- SAP application management

Run
