

Increase operational efficiency, drive innovation and discover new business models through the targeted use of artificial intelligence (AI) – with our highly flexible Swiss AI Platform as the key to success!

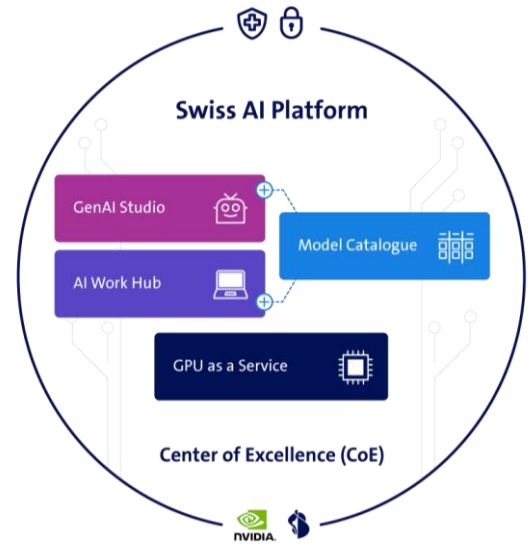

With GPU as a Service (GPUaaS), AI Work Hub and GenAI Studio, the Swiss AI Platform provides the main building blocks for a comprehensive AI ecosystem that is designed to make your company even more competitive.

GPUaaS offers Swiss companies dedicated high-performance hardware for their most demanding AI projects. You benefit from real-time GPU provisioning and only pay for what you use. Strict Swiss data governance guarantees the highest level of data protection.

AI Work Hub is designed for companies working in traditional ML areas – such as regression, classification, computer vision and NLP – and are eager to reap the rewards of generative AI. You can take advantage of the managed computing infrastructure, a rich collection of language models and a wide range of AI tools from NVIDIA and other vendors.

GenAI Studio provides direct access to powerful GenAI services such as customisable AI assistants and model fine-tuning via API endpoints. Configurable with just a few clicks, these tools can be seamlessly integrated into existing projects, allowing you to benefit from the latest AI technologies quickly and efficiently.

Thanks to seamless integration with the flexible and scalable Swisscom Enterprise Service Cloud (ESC), you benefit from a powerful and secure infrastructure that enables efficient and legally compliant use of data and AI services. This will ensure that you meet the specific security and compliance requirements of the Swiss economy.

Your benefits with the Swiss AI Platform

- Swisscom is based in Switzerland, where it operates one of the most powerful AI infrastructures from our partner NVIDIA directly on site. ✓
- The seamless connection to the Swisscom Enterprise Service Cloud (ESC) simplifies the integration of AI services into your existing company infrastructure. ✓
- Our Swiss AI Platform guarantees the highest security and compliance standards and ensures that sensitive company data never leaves Switzerland. ✓
- With GPUaaS, AI Work Hub and GenAI Studio, you get exactly the performance you need – perfectly tailored to your individual needs. ✓
- Our AI experts will support you from the ideation stage through to the successful integration of your AI projects in the company - always close to you and therefore easily accessible at all times. ✓

Facts & Figures

Would you like easy access to the most powerful AI infrastructure in Switzerland? That's exactly what we offer.

GPUaaS

- Kubernetes clusters with L40S and H100 GPUs
 - Self-service portal and API access
 - Role-based access model based on your own identity provider
 - Integration into your business applications (e.g. ITSM)
 - Choice of predefined GPU sizes and memory resources
 - Controlled use of resources through prioritisation of your jobs
 - Connection to your WAN network
 - Service class basis: support available Monday to Friday, 7 a.m. to 6 p.m. CET
 - Hosted and operated by Swisscom in Switzerland (geo-fencing)
 - Enhanced connectivity to your GPC provider
 - Interoperability with existing Swisscom Private Cloud services (IaaS/CaaS)
 - Reporting, security audit and proof of compliance (ISAE3402, etc.)
 - Access and use of different storage classes (NFS, S3)
-

AI Work Hub gives you access to tools and infrastructure that cover the entire AI project life cycle.

AI Work Hub

- Comprehensive platform for end-to-end management of ML projects
 - Integration of traditional ML and generative AI techniques
 - Flexible model development with traditional ML and generative AI models
 - Life cycle management from development to optimisation and monitoring
 - Scalable infrastructure for ML models
 - Business-specific ML tools such as notebooks, debuggers and profilers
 - Modular solution for data scientists, ML engineers and data engineers
-

Unleash the potential of GenAI with easy access to advanced AI services.

GenAI Studio

- Quick configuration of AI services thanks to easy-to-understand workflows
 - Choice of high-performance language models
 - Fine-tuning for industry-specific and company-specific data
 - Playground for comprehensive tests and experiments
 - Individually adaptable AI assistant
 - Efficient endpoint management
 - Safeguarding for AI services
 - Transparent overview of resource use and costs
-
