There are many different paths to the cloud.
To equip you for the best possible start of your journey,
we can support you with our AWS Base Camp.

Understanding the new cloud paradigm

At the start, the questions are numerous: why cloud computing? How will my company benefit if I choose the cloud? How do Amazon Web Services work and how will my employees benefit? How can I ensure that cloud costs stay within my budget? And how do you actually connect existing IT systems with the cloud?
To begin answering these questions is a huge challenge. At this coaching workshop, we will help you to lay the foundation stone so your company's journey to this new world is a success.

What will you learn at the AWS Base Camp workshop?
The AWS Base Camp is a workshop tailored to your needs. It is designed to make your entry into the world of cloud computing as easy as possible so you can draw maximum benefit from the numerous opportunities that hyperscaler platforms such as Amazon Web Services have to offer.
In order to shape the coaching so it meets your needs, you can choose from a selection of different workshop modules that focus on different themes.

These include an overview of the AWS ecosystem, pricing & TCO, migration, security, cost optimisation, DevOps and other modules.
The workshop can last as long as you need.
You can choose full-day, half-day or hourly coaching.
Let Swisscom's AWS experts show you how your company can benefit from their wealth of experience.
