Cash drawers and boxes

Metapace K-1 – professional cash drawer for high requirements
Description

- Tried-and-tested, sturdy cash drawer
- 8 coin compartments, 6 note compartments, 1 cheque compartment
- Rugged steel casing
- Standard connection for cash register printer
- Also suitable for under-table mounting or automatic opening of the drawer

Manufacturer page	METAPACE
Manufacturer guarantee	25 months

Dimensions	
Inserts	4 standing note compartments (adjustable) and 2 lying note compartments with note holders 8 coin compartments (removable) 1 cheque compartment - Lockable lid, coin counter insert, variable positioning of the inserts and note holders
Connection	POS printer connection (standard) 24 V, direct connection of the cash drawer to different POS printers, such as Metapace, Citizen, Epson, etc.
Security	3-station lock: manual opening, automatic opening or locked - Front slot 1: cheque compartment for cashless payment transactions or payment with large notes
Casing	- Dimensions (WxHxD) 410 x 114 x 415 mm (with feet) - Weight: 8 kg

Metapace K-3 – space-saving hinged-lid case
Description

- Durable flip-top cash drawer with 2-station lock for high-traffic checkouts.
- Compact hinged-lid case for particularly space-saving use
- High-quality hinged mechanism survives up to two million closings
- Sturdy steel casing with high-quality stainless steel lid
- Sturdy casing for high demands

Printers

Epson TM-M30II USB/LAN thermal printer, black
Description

Manufacturer no.	C31CE95122B0
Manufacturer link	Epson
Manufacturer guarantee	24 months

Versatile and compact thermal receipt printer

- Printing technology: Direct thermal printing
- Print media: Receipts
- Type: Desktop
- Power supply: Power supply unit
- Integrated cutter: Yes
- The Epson TM-M30II is ideal for POS environments where tablet PCs are used, such as specialty shops or restaurants. With its small footprint and the ability to choose whether to print from the front or the top by replacing two covers, it is an excellent choice for locations where space is limited.
- **Important: The Epson TM-M30II thermal printer does not come with receipt rolls, these must be ordered separately.**

Integrated cutting unit

This printer has an integrated cutting unit that automatically separates labels after printing. When using endless label rolls, you can create labels of individual length.

Direct thermal printing: cost-effective and easy

This printer uses the direct thermal printing process. This involves printing with a special, temperature-sensitive material. It changes colour due to heat. Apart from special thermal paper, you do not need any additional consumables. As a result, this printer is easy to operate and produces less waste. However, due to the temperature sensitivity of the medium, the printouts are not as long-lasting. Direct thermal printing is especially suitable for applications where short durability is not a disadvantage and cost-effectiveness is most important – for example, cash register receipts, suitcase tags, shipping labels or tickets.

Epson matrix printer TM-U220B LAN, dark grey
Description

Manufacturer no.	C31C514057BE
Manufacturer page	Epson
Manufacturer link	Epson
Manufacturer guarantee	24 months

Powerful receipt printer with drop-in paper drawer
- Variant: LAN connection, dark grey
- 9-pin dot-matrix printing (4.7 lines/sec.) on different-width paper rolls (57.5 mm, 69.5 mm and 76 mm)
- Drop-in paper drawer
- Automatic cutting unit (partial cut)
- Original and copy printing
- Sensors: open roll cover / paper roll used up / paper roll soon used up

The Epson TM-U220B is a sturdy, easy-to-use receipt printer with a high printing speed. It employs a dot-matrix printing procedure and prints paper rolls in three standard widths between 57.6 and 76 mm at a constant high speed of 4.7 lines per second. In addition to the original receipt, it can also issue a copy in each case. **Important: the Epson TM-U220B LAN matrix printer is not supplied with till receipt rolls; these must be ordered separately.**

Operating comfort and flexibility
The drop-in paper drawer makes replacing the paper roll fast and easy. Sensors inform you if the roll cover has not been properly closed, if the roll is coming to an end or if the roll has been used up. The integrated cutting unit (partial unit) automatically shortens the receipts to the correct length. The printer can not only be placed horizontally but also, with a (separately available) cradle, vertically on a wall.

Integrated cutting unit
This printer has an integrated cutting unit that automatically separates labels after printing. When using endless label rolls, you can create labels of individual length.

Zebra Technologies ZD421t label printer USB/Bluetooth
Description

Manufacturer no.	ZD4A042-D0EM00EZ
Manufacturer page	Zebra Technologies
Manufacturer link	Zebra Technologies
Manufacturer guarantee	24 months

104 mm thermal transfer printer with simple user interface

- Movable media sensor for flexible media handling
- Robust double-wall frame construction
- "OpenACCESS" system for easy media exchange, supports standard and high-capacity ribbons up to 300 m
- USB host port for external input devices, scanner, firmware updates or printer setup
- "Link-OS": simple, cloud-based monitoring and management

With the Zebra ZD421 you get a fast and easy-to-use thermal transfer printer. Its movable media sensor allows you to use a wide range of media types, including media with offset reflective marks, die-cut notches or transverse labels. A cloud-based solution allows you to centrally monitor and manage all your ZD421 printers. **Important: the Zebra label printer is not supplied with a ribbon or a label roll; these must be ordered separately.**

Ease of use and integration
The ZD421 places the highest value on user convenience. Media can be changed in seconds thanks to the OpenACCESS system. The printer will integrate smoothly into your environment: it supports both EPL and ZPL printer languages, so you can continue to use your familiar label formats. And with Virtual Devices, part of Zebra's Print DNA software solution, the ZD421 can even use other brands' printer languages. If your ZD421 is integrated into your network, you can monitor and manage it centrally with "Link-OS". Alternatively, thanks to the USB host connection, you also have a network-independent solution for firmware updates and printer configuration.

Thermal transfer printing: durable, tailored print products
This printer uses the thermal transfer printing process. This involves the ink from a separate ribbon being melted on the label paper and forming a permanent bond with the medium through the heat. This enables you to produce long-lasting, resistant print products. Thanks to the use of additional consumables, handling is somewhat more complex compared to direct thermal printers and produces more waste. But in return you have greater liberty in designing your labels thanks to the option of using different ribbons. This printing process is suitable for applications where durability is more important than costs – for example, long-term labels such as product or food labels as well as device and quality control markers.

Scanners

Honeywell barcode scanner Voyager 1200 g black

Description

Linear imaging barcode scanner

- High scanning performance, even with poorly printed and damaged barcodes
- Multi-interface: support of USB keyboard wedges and RS 232 interface
- Reads all standard 1D and GS1 DataBar symbols
- Easy stand mounting, ready to use immediately
- Lean ergonomic design with moulded grip recesses
- The Honeywell Voyager 1200g features impressively fast scanning speed with practically all linear barcodes, even if they are badly printed or damaged. The improved object recognition and automatic stand recognition and configuration permit rapid readiness for use. The versatile scanner scores points with its outstanding scan performance and sturdy design and is suitable for all kinds of use.

Intuitive operation

Another advantage of the Voyager 1200g is its intuitive operation that requires almost no user training. The device scans linear barcodes in all areas of use quickly and reliably and also decodes poorly printed, smeared or faded barcodes. Even dense barcodes with extremely low resolution of up to 3.5 mil are no problem, enabling you to dispense with the expensive procurement of a special scanner.

Shock-insulated printed circuit board

The Voyager 1200g, which was developed with the aim of low downtimes and maintenance costs, has only one shock-insulated printed circuit board and is consequently far less susceptible to jarring and shocks. The co-moulded rubber covering of the recessed operating button provides the device with additional protection in the event of accidental dropping. The safety features are rounded off by a scratch-proof glass window and protection class IP42.

RS-232C (+/-12 V) and IBM RS-485 are supported via a converter cable.

PLEASE NOTE: scanning the barcodes with a smartphone or from the screen is not possible.

Honeywell barcode scanner Genesis MS7580
Description

Manufacturer no.	MK7580-30B38-02-A
Manufacturer page	Honeywell
Manufacturer guarantee	24 months

Presentation area imaging scanner

- Shielded lighting
- Supports reading from mobile phones
- Up to seven barcodes in a single scan
- USB, RS232, keyboard wedge, IBM 46xx (RS485)
- Automatic cable recognition and configuration
- The Genesis MS7580 from Honeywell is the world's first presentation area imaging scanner designed to decode all standard 1D, PDF and 2D codes. It combines revolutionary imaging technology with an elegant and simultaneously durable design and permits enhanced productivity. Thanks to its high performance and flexible form factor, the Genesis MS7580 is suitable for environments ranging from production and health care to retail sales outlets.

Onboard interfaces

Unlike many other scanners with several onboard interfaces, the MS7580 has four dedicated memory banks. Consequently, all of the configuration settings for the RS232, keyboard wedge, USB and 46xx RS485 interfaces can be stored in a memory bank of their own. The automatic cable recognition and configuration simplifies conversion to a new interface, eliminating the need to scan programming barcodes.

Seven barcodes in a single scan

By using "CodeSelect", the MS7580 records up to seven barcodes with a single scan and issues the data in a predetermined sequence.

Plug-ins directly in the scanner

"TotalFreedom" expands the scanner functionality by enabling formatting, decoding and parsing plug-ins to be loaded directly into the MS7580 instead of the host system.

Flexible and future-proof

This scanner also records two-dimensional codes. Thanks to the greater information density, these code types are capable of more versatile use. Moreover, they can be read omni-directionally and are more tolerant of defective printing and damage. Of course 2D scanners also read conventional 1D barcodes. This makes them a forward-looking investment, irrespective of whether you already use 2D codes or just want to keep this option open.

PLEASE NOTE: scanning the barcodes with a smartphone or from the screen is possible.

NewStar FPMA-W810 wall cradle, black, for the enforeComet
Description

Manufacturer no.	FPMA-W810BLACK
Manufacturer page	NewStar
Manufacturer guarantee	24 months

For flat screens from 10" to 27"
• Depth adjustable: 4 to 7 cm
• 20° tiltable, 180° swivelable

The NewStar FPMA-W810BLACK is a tiltable wall cradle for flat screens and flat-screen televisions up to 27" (69 cm). This cradle is a good choice if you want to have ultimate flexibility when watching television with a flat screen. The cradle is depth-adjustable in a range from 4 to 7 cm.

Enjoyment from any angle
NewStar's tiltable (20°) and swivelable (180°) technology with two axes allows you to change the cradle to any viewing angle in order to benefit in full from the options of your flat screen. Irrespective of whether in an office, restaurant or shop, you can create a clean design ambience with the FPMA-W810BLACK cradle.

Other practical features
The NewStar FPMA-W810BLACK pivots and is suitable for screens of up to 27" (69 cm). The cradle is suitable for screens with VESA 75 x 75 up to 100 x 100 mm hole patterns. Many other hole patterns can also be covered using NewStar's VESA adapter plates. All of the mounting materials needed are included in the scope of delivery, meaning mounting and installation are quick and easy.

10" touchmonitor PC with Android operating system and Power-over-Ethernet technology

- 10.1" IPS touch display (10 point projected capacitive) with a resolution of 1280 x 800
- Quad-core processor with 2 GB RAM for smooth operation, 16 GB storage capacity (eMMC)
- Connections: 1x mini HDMI output (1280 x 720 @60 Hz), 2x USB-A 2.0, 1 x micro USB (OTG), 1x RJ45 (PoE), SD card slot
- Integrated webcam (2 Mpx), loudspeaker (2 x 1.5 W), WLAN IEEE802.11b/g/n, Bluetooth 4.0, VESA mounting interface (75 x 75 mm)
- Automatic screen rotation (portrait/landscape), anti-fingerprint coating for a clean display and smooth operation
- Android operating system for flexible customisation and easy installation of apps

The ProLite TW1023ASC-B1P touch panel PC is the perfect choice for high usage environments such as retail, interactive POS, information desks or hospitality. Power-over-Ethernet (PoE) technology enables both data connection and power supply via a single cable, making installation very simple. For this purpose, the unit can be operated in landscape, portrait or face-up format. Together with the built-in camera and speakers, it offers limitless interactive installation possibilities.
