

The Swisscom RA app provides simple identification for electronic signatures, replacing a time-consuming registration process.

Identification for legally valid electronic signatures made easy

What is the Swisscom RA app?

On the one hand, the benefits of electronic signatures are obvious: a seamless, efficient process with no need for paper and no logistical, scanning, printing and postage costs. However, before the signature service can be used, users need to be clearly identified and registered. What used to be an extremely time-consuming process has now been made much easier thanks to a new solution from Swisscom: mobile identification and registration using the Swisscom RA app. The app can be used by trained, authorised employees known as RA agents.

Identification with the RA app in three steps

– Download the Swisscom RA app

The Swisscom RA app can be downloaded free of charge from the Apple or Android app store.

– One-time identification

The RA app makes one-time identification more flexible and can be used anywhere at any time. Depending on the quality of the electronic signature, the person being identified only needs to be physically present once.

– One-time registration

The validity of the ID document (ID card or passport) and the accuracy of the data are checked by a trained registration authority agent (RA agent).

After this one-time identification and registration process, the qualified electronic signature can be used wherever the Swisscom All-in Signing Service is available.
