

UCC Microsoft Private Cloud from Swisscom enables flawless collaboration between the public and private cloud.

UCC Microsoft Private Cloud Services from Swisscom

UCC Microsoft Private Cloud Services from Swisscom offers the perfect balance between data protection, legal requirements and business continuity in connection with Microsoft Cloud Services. This means your company can operate confidently and smoothly in any situation.

It is important to have a carefully prepared cloud strategy that takes into account the needs and requirements of your company. This may involve storing some

data in the cloud, while other data may be held in Swisscom data centres. A hybrid strategy offers advantages in relation to data protection, legal requirements and business continuity. Microsoft Cloud Services can also be ideally combined with other Swisscom services. A lack of diversification in a cloud strategy can lead to problems in the long term. This is because changes to the provider's services or price models can have an impact on your business.

Your benefits with UCC Microsoft Private Cloud Services from Swisscom

Service with increased data protection and legal requirements

Your data is securely stored and managed, without you having to worry about complying with the strict data protection and legal regulations in your industry.

Service is compatible with the M365 Business Continuity service

Place your trust in a reliable, robust solution that maintains the availability of your data and applications at all times, even in the event of unforeseen events or downtimes in the cloud.

Data is stored and processed in a Swisscom data centre

Your data is stored in Swisscom data centres that meet the highest standards of data security.
