

New technologies are creating new challenges for the protection of your company assets. Targeted attacks on your company are very difficult to detect using traditional security solutions.

Swisscom will provide you with expert, independent advice, from strategy design to the implementation of information security, IT security and cyber-security measures, ensuring that your company is fully protected.

What is Security Management Consulting?

Today, information security and cyber-security are relevant at all levels of your business. With new trends in technology and mobility, as well as increased networking of data and systems, they are becoming vitally important. Cyber-security should concern all aspects of information security in your business. In particular from a governance, management and quality assurance point of view, the security concept must always be considered as being in a state of transition which, through continuous maintenance and improvement, must meet all stakeholder requirements.

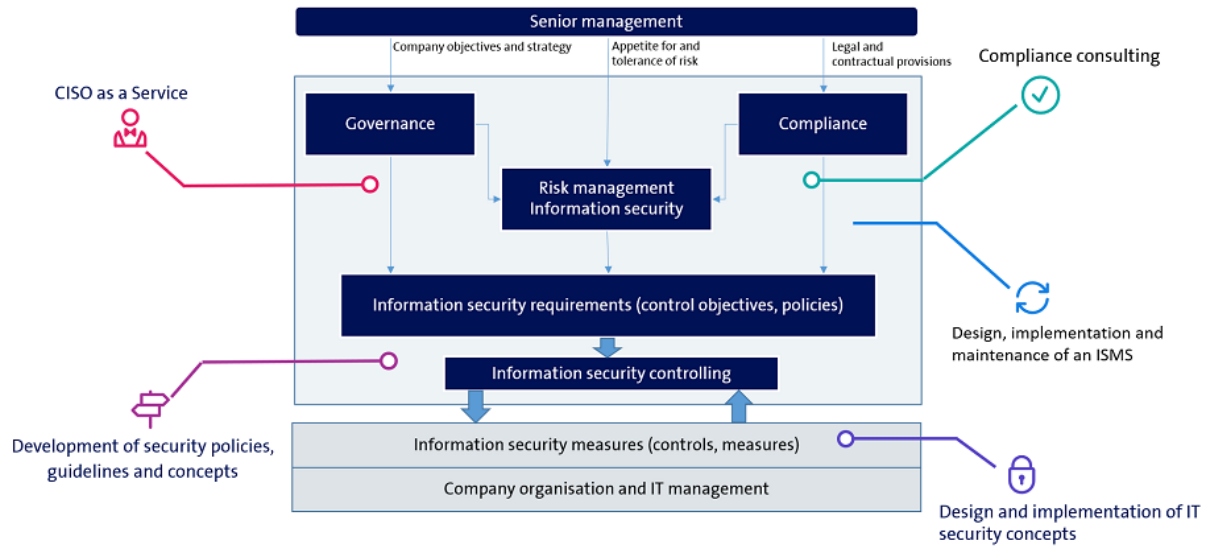

We will support you in your project work and day-to-day business and help you to continuously improve IT and information security in your company, ensuring that it is always in line with your business objectives. We'll help you to develop your security strategy and lay the foundations for a secure future. Together with your specialists, we'll develop instructions, guidelines and concepts in the various fields of information security.

Your benefits with Security Management Consulting

- **Comprehensive support**
Expert help and support with decision-making, from developing the right strategy to selecting suitable technology.
- **Knowledge**
A clear understanding of cyber-threats in your company from top management to employees.
