

Data analysis is playing an increasingly important role for businesses in the connected world. Processes that were 100% physical just a few years ago have become digital. Harvested data must now be converted into relevant information that can be used for operational and strategic decision-making.

Give yourself a competitive advantage with integrated Microsoft solutions – by using your own data.

What is Analytics and Data Services?

Analytics and Data Services saves you the job of manually transferring data from your systems (e.g. CRM, ERP, POS) into one or more Excel tables. You can use the tools for analysis, reporting, data integration and dashboarding in order to interpret your data in a reliable way. The solutions enable you to automate analytical data processing and generate relevant evaluations that are relevant to you at the right time for everyone involved. Analytics and Data Services offers you an intuitive, fast, interactive and economical analytics solution based on Microsoft on-premise (e.g. SQL Server, Integration Services or Reporting Services) and cloud technology (e.g. Azure SQL, Azure Synapse or Power BI).

Your benefits with Analytics and Data Services

- **Adaptable**
The solutions can be quickly and flexibly adapted for every industry and every business process.
- **Reliable**
Azure Cloud gives you hybrid stability with on-premise deployments and/or agility.
- **Years of experience**
You'll benefit from our experience with numerous process- and industry-specific sources such as SAP ERP and S4/HANA, Microsoft Dynamics and Navision, as well as Avaloq, Finnova or Adcubum Syrus.
- **On-premise implementation**
Our specialists will implement the service at your premises in agile teams, either for a fixed price or on a call-out fee basis.
- **Equipped for the future**
With your data lake, data warehouse or data mart and the associated AWS analysis tools, you will be equipped for the data-driven future.

Data Management

Facts & Figures

Basic services

Reporting

Using your current data, you can produce fully automated, highly professional, formatted, tailor-made reports (e.g. in PDF) on an hourly, daily, weekly or monthly basis. These can be dynamically integrated into your Intranet or web solution or simply distributed via e-mail.

Dashboarding

With interactive analytical applications based on modern web technologies, you can ensure that your users can access your key indicators at any time on different devices (mobile and PC).

Analysis

Easily identify exciting cause-effect relationships in your data. You will get the tools for individual analysis of your data pools: from aggregated figures to tiny details.

Data Management

Your data will, according to defined company rules, be regularly integrated from various sources, automatically processed and stored scalably and efficiently so you can use it for analysis, dashboarding and reporting – we'll develop your data warehouse, data mart or data lake.

Scope of services

We will carry out proofs of concept and technological tests tailored to your requirements.

We will support you with your projects, from concept to implementation to operation.

We offer training and education for power users, IT staff and other users.

Our partner

Gold Cloud Platform
Gold Datacenter
