

Enterprise SIP Cloud connects your cloud telephony provider to the public telephone network. Microsoft is the first provider with a direct link to Swisscom

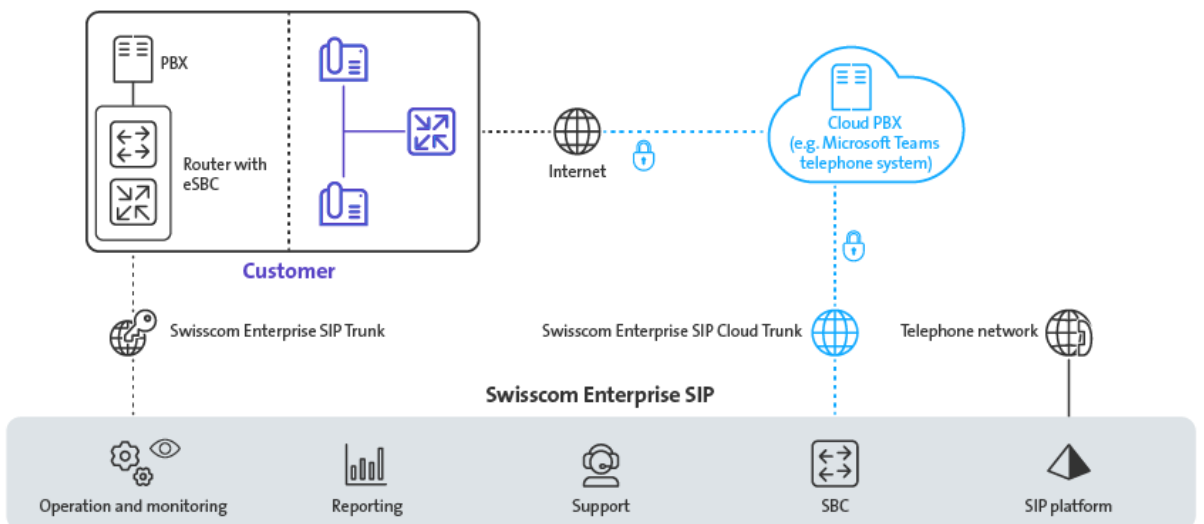

Enterprise SIP Cloud

Cloud-based telephony solutions are becoming increasingly important and now offer a full range of telephony functions. With Enterprise SIP Cloud, existing land-line numbers can be used with cloud-based telephony systems such as Microsoft Teams.

popularity and offer a wide range of telephony functions as well as collaboration tools. Such solutions can only reach their full potential if they are also able to handle external phone calls. Enterprise SIP Cloud makes this possible in a simple, integrated way.

Enterprise SIP Cloud Trunk is especially attractive for customers who already use Microsoft Teams as a collaboration tool, who want to extend their existing SIP Trunk solution or who are planning a gradual switch to cloud-based telephony.

Alongside traditional IP telephony systems, cloud-based solutions such as Microsoft 365 are growing in

Calls made by an end user at the customer's location are transmitted via the Internet to the cloud telephony provider, from where they are directed via the Enterprise SIP Cloud Trunk to Swisscom and the public telephone network.

swisscom

Applications

- You already have one or more Enterprise SIP connections, which you use with your PBX. You now want to gradually switch users to cloud-based telephony.
- You already use a cloud-based telephony solution and would like to add your landline numbers to the system.
- You are already using a combination of an on-site PBX and a cloud-based telephony solution.

Specifics

- Enterprise SIP Cloud makes a smooth transition from an on-premise PBX to a cloud-based solution achievable. You install the cloud-based solution and then move your existing phone numbers from your on-site trunk to the cloud trunk online in the Swisscom Business Centre.
- With a cloud telephony solution, all telephony functions are available in the public cloud, e.g. with Microsoft Teams. Licences must be obtained from the relevant provider. With Enterprise SIP Cloud from Swisscom, such services can be used with existing or new landline numbers.

Use tried and tested functionalities in the cloud

The tried and tested features of Enterprise SIP are also available with the Cloud version:

- High availability and reliability
- Emergency number routing
- Call filter
- Anti-spoofing function
- Call forwarding controlled via an API

Microsoft 365 Management from Swisscom

With our optional Microsoft 365 Management service, we can offer you professional support with the operation of your Microsoft 365 environment. Our experts can provide end-to-end assistance with the telephony aspects of your solution and, if you have any problems, identify the causes and resolve them for you.
