

eBill from Swisscom - Conextrade

Digitise your billing with eBill. Your customers receive their bills directly in the e-banking portal and can initiate payment with just a few mouse clicks. This means less work for you – what's more, you benefit from reliable incoming payments and retain control over the billing process

This is how the service works:

- The biller supplies the billing data incl. PDF to Conextrade in electronic form.
- Swisscom creates the bill in eBill format from the billing data and sends it to the eBill infrastructure.
- The bill is sent directly to the bill recipient's e-banking portal, where it can be viewed, saved and approved for payment.

Main functions:

- An eBill that has already been sent can be replaced with a new one if, for example, the first eBill was faulty.
- You can send the bill recipient an enclosure in addition to the bill.
- Status notifications (such as completed) are provided as feedback and sent to you.
- You will automatically receive notifications when new bill recipients have registered.

Benefits and advantages:

- Get your money on time – reliably when compared to paper and e-mail.
- Efficient and secure billing – you create the bills in your billing software and transmit them seamlessly to your customers' e-banking portal via Conextrade.
- Increase customer satisfaction – with eBill, your customer receives and checks their bill directly in the e-banking portal and can therefore pay it easily and securely. You benefit from fewer customer queries and more reliable incoming payments.
- Increase sustainability – with eBill, you are acting sustainably by eliminating paper, thus helping to create a positive brand image.
- Save costs – unlike with paper billing, there are no printing and postage costs. Moreover, using digital processes greatly increases your efficiency.
- Make things simpler – with Conextrade, you have one contact person for eBill as well as for the complete procure-to-pay and order-to-cash processing.

Facts on eBill:

- E-Invoicing (B2B) and eBill can be implemented in the same integration project
- Ideal as a complementary product to E-Invoicing PDF
