

Data traffic must be monitored, controlled and secured effectively to ensure a safe web and cloud experience.

Our scalable Secure Web Gateway (SWG) is designed to secure your Internet connections.

**The MSS-i Managed Secure Web Gateway (SWG) offers a central, highly effective web security solution for top-class threat protection.**

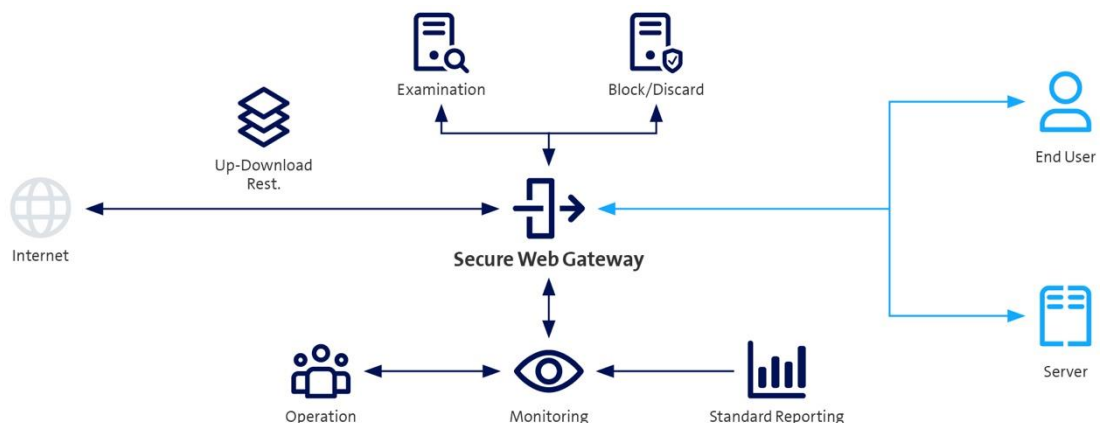

With the MSS-i Managed SWG, web data traffic flows via the Secure Web Gateway and all downloaded and uploaded objects are processed in a single, efficient cycle through multiple security layers. This solution

first eliminates known threats, reducing the data traffic to be processed by subsequent security modules that are more CPU-intensive. The solution offers: screening and validation of SSL data traffic, user authentication, advanced real-time web filtering, bandwidth management, a thorough multi-layer content check and the analysis of malware.

### Your benefits with the MSS-i Managed Secure Web Gateway (SWG)

Swisscom sets up and runs the Secure Web Gateway from a globally leading provider of security solutions.	✓
Swisscom assumes the professional implementation and operation based on your security requirements.	✓
The MSS-i Managed SWG offers the monitoring of web and cloud use and the accelerated performance of the cloud application.	✓
The service provides an overview of the encrypted data traffic (SSL interception).	✓
SWG works seamlessly with leading technologies, including anti-malware, anti-virus software, blacklist and whitelist modules from various providers and static code analysis.	✓

### How the MSS-i Managed SWG works

## Facts & Figures

---

### Basic services

- URL evaluations and filtering in real-time malware scanning
  - Proxy auto-configuration (PAC)
  - SSL interception
  - Provision: on premise, Swisscom clouds, public clouds (Azure, AWS)
  - Project and operation services including customer portal
  - IT service operation
  - Service desk
  - Health/Device monitoring
  - Vulnerability management
  - Service continuity management
  - Standard service level reporting
  - Service request and order management
  - Release management
  - Health/Device incident management
  - Support hours: 5x11 hours, 7:00 – 18:00
  - Availability: 99.0% (dual node)
- 

### Optional services

- Web statistic reporting
  - File upload/download restriction
  - Safe search
  - User authentication / Active Directory groups / additional Active Directory groups
  - Application control
  - DLP connection
  - M365 configuration
  - Policy customisation
  - Advanced URL filtering
  - Content analysis system
  - Scanners for a range of file types
  - Change request management
- 

### Additional services

- Support hours: 7x24 hours, 0:00 – 24:00
  - Availability: 99.9%
  - Tickets / hour pool for service requests
  - Self-service portal
-
