

SCION, the next-generation Internet for B2B customers, can build a secure, private ecosystem for routing confidential data.

SCION Service

Effective control end-to-end on how your data is routed.

Malicious attacks launched via the Internet are a real and growing threat. The rerouting of data and the network attacks massively restrict the availability and performance of certain online systems and services. By design SCION makes network attacks impossible.

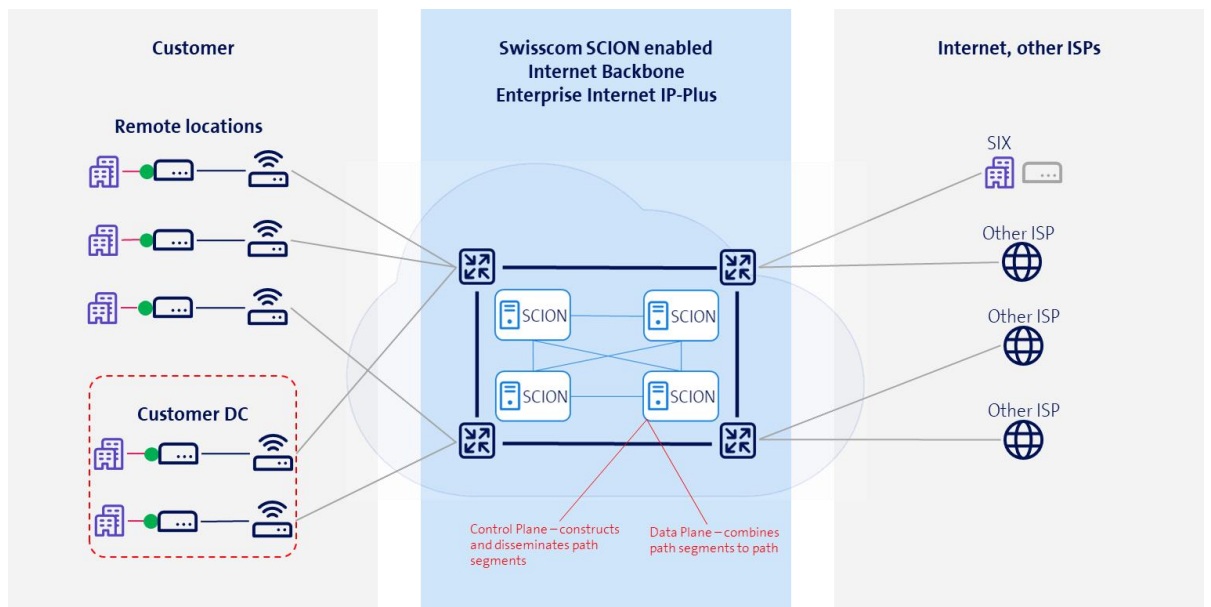

What is the SCION Service?

With the SCION Service, you can protect your company from network attacks, BGP prefix hijacking, ... and ensure that your service platforms remain operational. You can guarantee permanent, secure access to your systems, due to the multi-path fail-over feature of SCION. Swisscom is innovation leader in secure Internet and as such is committed to the propagation of SCION technology to increase security and performance of customer's network on national and international level.

How you benefit with Swisscom's SCION Service?

- Communication guarantees in spite of network attacks, BGP prefix hijacking, etc.
- Network attacks are made impossible by design
- Dramatically higher availability thanks to multipath communication
- New security properties: Geo-fencing, path verification; DDoS prevention
- Highly secure PKI to ensure correctness of certificates
- Access the SCION management platform, including path and performance control
- A 24/7 help desk is provided, with support from our team of experts
- Flexibility in Swisscom SCION Services to fit with customer specific needs

Effectively protect yourself against network attacks, BGP prefix hijacking attacks, win your customers' trust and boost your company image – for the long term.
