

Business Internet Services wireless

Access the Internet anywhere via the 4G mobile network

Digital technologies will change not only value chains, organisational structures, processes and business models, but entire companies and industries. SMEs need an increasingly efficient communications infrastructure, including reliable networking and a secure Internet connection.

What is Business Internet Services wireless?

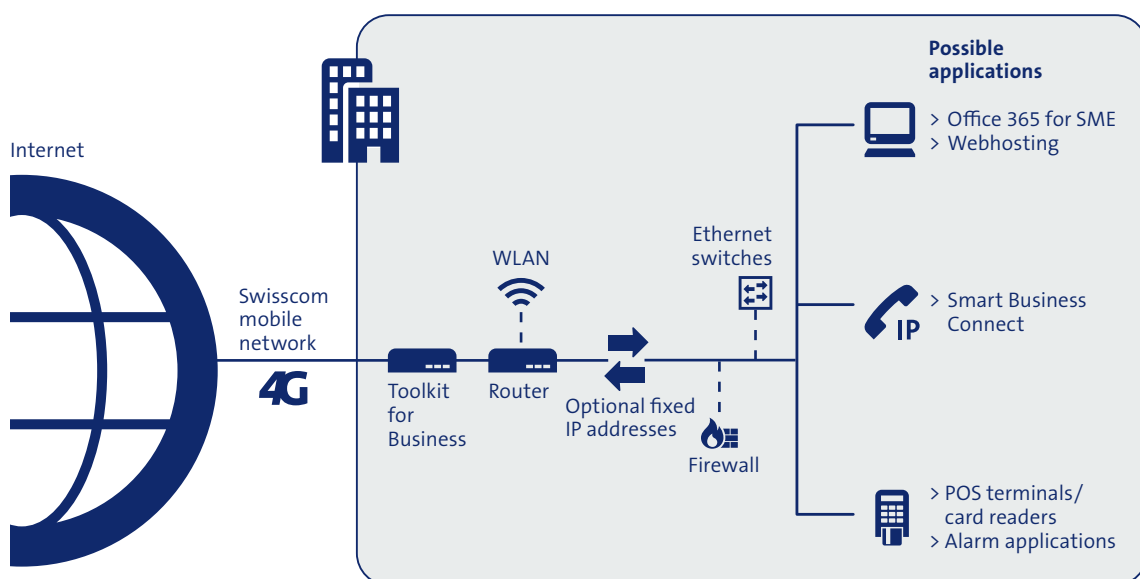

In locations where installing a wired Internet connection is not worthwhile or the Internet bandwidth is insufficient, Business Internet Services wireless offers you secure Internet access via the 4G mobile network. If required, Business Internet Services wireless can be extended with a network solution (Business Network Solutions) or telephony.

Your benefits at a glance:

With Business Internet Services wireless

- > you get a high-performance Internet connection that you can use in any location;
- > you don't need a copper or fibre connection; you are connected exclusively via the Swisscom 4G mobile network;
- > you can choose flexible installation anywhere¹; the mobile solution is ideal for temporary uses, such as building sites, pop-up stores and events;
- > you can be sure of a secure Internet connection; depending on your needs, your Internet connection can also be integrated into your company network.

You will benefit from Swisscom's tried and tested installation and support services, including a state-of-the-art router, or you can even entrust the installation process to a certified IT partner so you can concentrate fully on your everyday business.

¹ NB: Service quality can only be guaranteed at the location where the service is installed. If you change location, we recommend checking 4G mobile network coverage first.
