

7 Advantages of PACS-as-a-Service

Hospitals, doctors and radiologists work with medical imaging and make diagnoses based on it. Images must also be shareable with various medical service providers, as well as with patients. PACS-as-a-Service by Swisscom Health offers all the tools needed for this and the service to match. Seven advantages of this offer at a glance.

1 No installation costs

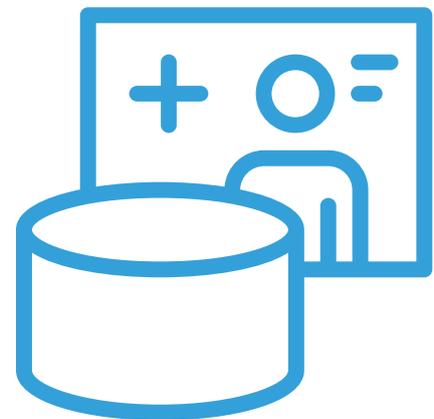

The image archiving system «Picture Archive Communication System» is based on PACSonWeb, a cloud-based PACS for medical imaging. The application is accessed easily through an internet browser and does not require the installation of software locally on your computer in order to display DICOM images without loss of quality. That saves effort, time and money. We connect you to the cloud in less than two months.

2 Location-independent, cross-platform work

Many institutions, outpatient clinics and hospitals now have multiple locations. No problem with PACS-as-a-Service: since it's a cloud-based solution, you can access data from anywhere with different devices – tablet, mobile phone or laptop. There's more: you can also share images with other medical service providers, whether radiologists, GPs or hospitals, as well as with your patients.

3 Highest security standards

Standards for data protection and data security in the healthcare sector are high and the topic is becoming more complex as digitalisation grows. With PACS-as-a-Service, your data is securely managed in a Swiss data centre with the highest security standards.

7 Advantages of PACS-as-a-Service

4 Always up to date

You no longer have to worry about updates or system maintenance. Thanks to the cloud, you are always connected to the most up-to-date and only version that exists. Plus, we handle all the servicing and support. Five days a week and where necessary even 24/7 in German, French, Italian and English. That saves time and effort – and ultimately also money.

6 Speech recognition with mobile app

PACS-as-a-Service has outstanding integration solutions, including all required artificial intelligence applications. An app is available for fully integrated speech recognition.

5 Stored images – 10, 20 or 30 years

As a medical service provider, you are required to store your data. This requirement can be for 10, 20 or even 30 years. With PACS-as-a-Service, your images are stored and you do not have to worry about back-ups. It's all covered by Swisscom Health.

7 All from a single source

Swisscom Health is a leading provider of e-health solutions in the Swiss healthcare sector. Whether medical imaging, information systems or secure transmission of medical and administrative data – all products can be integrated with each other depending on the customer's needs and wishes. Get in touch for a no-obligation consultation.
