

Secure, efficient cloud platforms are becoming increasingly important.

We'll accompany you on this journey so your business can react to change more quickly, flexibly and sustainably.

Flexible, modular assistance on your journey to the cloud.

What is Journey to the Cloud?

Journey to the Cloud provides you with step-by-step assistance in your search for innovative cloud-based business solutions. Cloud opportunities and existing IT infrastructure will be fully geared to your company's changing needs. You alone will determine the objectives and level of integration.

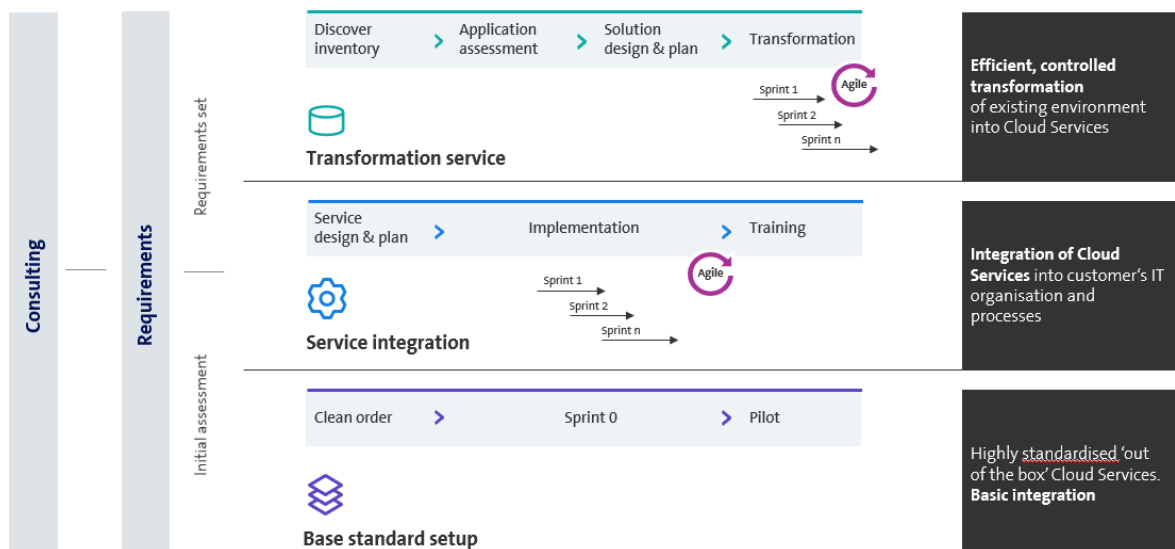

Our Journey to the Cloud is based on a modular, flexible and transparent best-practice approach with clearly defined deliverables. We use a tried and tested framework that enables us to offer you flexible, modular support on your journey to the cloud, tailored to your requirements.

We will assess your IT and/or cloud strategy and conduct an initial assessment, on which subsequent steps will be based.

You can simply gather your first experiences of the cloud or implement cloud use cases, and you can contact our certified, experienced cloud experts at any time.

Your benefits with Journey to the Cloud

- **Foundation**
Define your IT and cloud strategy, assess the current status of your IT and applications. Create a basis for decision-making.
- **Modernisation**
Combine and expand your existing IT with cloud functionalities.
- **Innovation**
Use innovative services from the public clouds (Microsoft Azure and Amazon AWS).
- **Operation and optimisation**
Use our managed services for the operation and optimisation of your existing hybrid and cloud solutions.
- **Data**
Generate added value for your business from your data.
- **One partner**
Trust our experience in the cloud, connectivity and data fields

Facts & Figures:

	<ul style="list-style-type: none">– Definition of your IT strategy and/or cloud strategy and of target operating model (TOM)
Consulting	<ul style="list-style-type: none">– Consulting on cloud security, governance and data, and technical consulting on the various cloud platforms. Verification of existing cloud installations using the "Well-Architected Framework" (WAF)– POCs and starter kits in order to take initial steps in the cloud (Azure, AWS, Swisscom), implement a first use case or use new cloud functionalities (AI, Block Chain, Machine Learning, Big Data, IoT etc.)
	<ul style="list-style-type: none">– Initial assessment in order to document the current situation in full, and define and prioritise scope and objectives. Recommended next steps (definition of your journey) according to the following criteria: business, people & organisation, governance, architecture, security, and processes and operation
Requirements	<ul style="list-style-type: none">– Requirements set: definition and documentation of customer-specific target platform requirements
	<ul style="list-style-type: none">– Clean order: define clean order in a joint workshop– Sprint 0: onboarding of target platform or hybrid solution
Base standard setup	<ul style="list-style-type: none">– Pilot: gather first experiences by integrating an application on the target platform
	<ul style="list-style-type: none">– Design & plan: define concept for your individual requirements– Implementation: implement requirements– Training: customer-specific training
Service integration	<ul style="list-style-type: none">– Discover inventory: obtain customer inventory by scanning or importing– Application assessment: check applications for cloud readiness and migration complexity (online SCRAT questionnaires sent directly to the application managers and evaluated)– Solution design & plan: based on the assessment, the future cloud configuration of each application or solution is determined in accordance with the design principles. Related planning is also carried out in consultation with the customer.– Transformation: implementation of the migration process, supported by our orchestrator cloudinator (support for all design, planning and migration steps). Using dashboard functionalities, you will see the current status of the process at all times. The transformation is based on a factory approach, with experienced migration managers working with the customer's application managers, who retain control at all times and define the speed of change.
	
Transformation
