Carbon Footprint Software Evaluation
Which software is suitable for my carbon management?

swisscom

How far have you gone on your climate journey?

Long-term and effective carbon accounting can only be achieved with the right software support, which facilitates data collection and evaluation immensely.

Are you just starting out on your climate journey and thinking about which CO_2 accounting software to use? Or have you been on your climate journey for quite some time, but are spending too much time on data collection and reporting?

Reviewing and evaluating the numerous providers of carbon management software involves a great deal of effort. We have analysed all the leading software tools in depth over the last two years and are happy to share this knowledge with you.

Before selecting the software, you need to know exactly what your goals and priorities are. Not every tool is suitable for your own strategic orientation, industry or applicable regulatory framework and environmental standards.

Swisscom's extensive IT expertise, along with our long-standing commitment in the area of sustainability and climate protection, enable us to share with you the know-how gained in numerous projects regarding CO_2-accounting and management, as well as climate strategies, and to guide you through the evaluation process with structured decision criteria.

Your benefits

- We share our many years of experience in software evaluation, implementation and data management in the climate sector with you.

- Best practice examples help you to take your climate strategy to the next level.

- Focus on your core business. We take over the time-consuming search for suitable software solutions for you.

The software evaluation process

- **Benchmark analysis** in the area of carbon management included
  - Review of the existing data structure / existing balance sheet (if available)
  - Recording of needs / review of existing software (if available)

- Joint **coordination and prioritisation of decision criteria**
  (e.g. requirements for maturity, functionalities, IT architecture, operation, security, pricing).

- **Evaluation and comparison of software providers** by our climate experts

- **Presentation of the shortlist** with recommendations for further action

Offer overview

Costs: CHF 3,500

We would be happy to provide you with a non-binding initial consultation.
